Amateur Photographer For everyone who loves photography

**SOME** of us took our first photographic steps as a result of being trusted with the family camera before we were old enough to own one of our own. Others started taking pictures purely for the fascination of the cameras themselves, or the mystical processes that turn that faint clicking noise into a life-like picture drying on the darkroom wall. A desire to capture special moments for posterity is what gets parents hooked, while the hope that the world can be changed inspired those who spent their childhood Sundays lying on the floor glued to the world-opening documentary photos in newspaper colour supplements. Some of us love mechanics, some science, some art and others magic. Sometimes a

fondness of one of those elements can lead to an unexpected passion for another, and other times our attention, over the years, undulates in waves of obsession between them all.

I hope that AP has something for everyone, and perhaps the inspiration to turn narrow interests into wider pursuits. It is the breadth of the photographic subject that makes it so enduring and compelling, and I recommend you try it from every angle. Here's wishing you a wonderful and inspired Christmas.

# DSLRs GO TO WAR AS C

In a year that combined photokina and London 2012, it seemed apt that camera makers were falling over themselves to release

### THE FULL-FRAME

battleground witnessed a raft of new entrants in 2012, as lower-down the sensor-size chain compact system cameras fought to be crowned the new king of the interchangeable-lens camera.

Early in the year, Nikon signalled its intention to beat Canon in the race to launch a new professional DSLR for sports photographers in time for the Olympics, by unveiling the 16.2-millionpixel D4 to replace the D3S

Canon, meanwhile, was hoping to pip Nikon to the post with the debut of its EOS-1D X. First announced in 2011, Canon claimed it would deliver the same resolution as the 21-million-pixel EOS-1Ds Mark III, despite having three million fewer pixels

Also entering the full-frame battleground in February was the Nikon D800, a 36.3-million-pixel model, which appeared as the firm was keen to stress that camera

# FULL-FRAME IN THE FRONTL

NEW	Canon EOS-1D X*	18.1MP	14fps	204,800
				* Announced in 2011

production was back on track after the natural disasters in Asia the

The pre-photokina kit frenzy saw Sony reveal the new 24.3-millionpixel Alpha 99, which became the first full-frame camera with a translucent mirror, replacing the four-year-old Alpha 900 DSLR.

Around the same time, Nikon billed

its 24.3-million-pixel, full-frame D600 as a game-changer. Aimed at high-end photo enthusiasts, it would come with a sub-£2,000 price tag in a bid to attract a wider market.

Canon then hit back with the EOS 6D, a 20.2-million-pixel model with built-in Wi-Fi and GPS, also set to go head-to-head with Sony's Alpha 99.

But it was a surge in CSC lenses during 2012 that showed any detractors that the smaller format was not only here to stay but also threatened a market traditionally held by the mirror-toting DSLR.

CSC makers wasted no time in firing the first shots as we entered 2012. Olympus, seemingly unfazed by its financial scandal, planted a 1.44-million-dot EVF inside its new micro four thirds model, the 16.1-million-pixel OM-D E-M5.

And Fujifilm officially unveiled its first CSC, the retro-styled X-Pro1, while conceding that a new DSLR was now unlikely.

# **APNews**

# SCs BOOM

the 'first', 'smallest' or 'lightest' full-frame camera]

WITH seven new fullframe DSLRs this year, 35mm-sized sensors are no longer the preserve of the professional. The Canon EOS 6D and

Nikon D600 are perhaps the most relevant to enthusiasts. With a 20.2-million-pixel, full-frame sensor and a body-only street price of £1,800, the EOS 6D should be a hit. However, the D600 has a higher resolution of 24.3 million pixels, and at around £1,500 is cheaper than its Canon rival.

It has been all change at the top end of the full-frame DSLR market, too, where the emphasis has been on improving low-light sensitivity, for both sensors and AF, with both Nikon's D4 and the Canon EOS-1D X offering very good low-light shooting capabilities.

Canon's EOS 5D Mark III impressed with its new AF system, faster shooting rate and excellent video capabilities, but its 21.3-million-pixel resolution underwhelmed in light of Nikon's D800 which, with its class-leading 36.3-million-pixel resolution, is the camera that many enthusiast photographers aspire to own.

Let's not forget, too, that Sony recently launched its first full-frame, £2,300 SLT, the Alpha 99. This is the first full-frame digital camera to use a translucent mirror and electronic viewfinder, and it also uses dual phase-detection AF. This combines a traditional AF sensor with on-sensor phase detection, which is innovative technology that we may soon see in other DSLRs.

It is going be interesting to see how these cameras fare in 2013.

# It was full-frame steam ahead fin 2012 as Nikon unveiled the 36.3MP D800 and Sony its 24.3MP Alpha 99, both featuring a top equivalent ISO sensitivity of 25,600

# SURGE OF THE CSC

**CANON** entered the CSC arena with the APS-C-sensor-equipped, 18-million-pixel EOS M (pictured), after years of speculation.

Pentax's mirrorless K-mount camera, the APS-C-sized K-01, also surfaced – the striking looks of the 16.28-million-pixel model taking many observers by surprise.

Meanwhile, the 12.1-million-pixel Panasonic Lumix DMC-GF5 micro four thirds model joined the race to conquer DSLRs, boasting an AF speed of 0.09secs and replacing the Lumix DMC-GF3

Samsung brought mobile internet connection to its NX range in the shape of the Wi-Fi-enabled NX20, NX210 and NX1000.

Sony's NEX-F3, a 16.1-millionpixel, APS-C-sized CSC was born in June, and Panasonic claimed that its new 16-million-pixel sensorequipped Lumix DMC-G5 set a new benchmark for CSCs. It was blessed with 'more DSLR-like' handling.

Nikon revamped its J1 to launch the 10.1MP Nikon 1 J2, the firm emphasising 'artistic potential'.

Sony debuted the 16.1-millionpixel NEX-5R, an APS-C-format model with a tilting touchscreen, and the 16.1-million-pixel NEX-6.

And a flurry of pre-photokina unveilings included the 16-millionpixel Panasonic Lumix DMC-GH3, kitted out with a 1.74-million-dot OLED EVF and a top ISO of 25,600.

Hasselblad raised multiple eyebrows when it announced plans to enter the CSC market in a tie-up with Sony. The Lunar would borrow electronics from the Sony NEX-7.

At the same time, Olympus showed its new 16.1-million-pixel Pen E-PL5 and E-PM2, borrowing its TruePic VI processor from the OM-D E-M5.

# THE RISE OF HIGH-END COMPACTS

**CANON** put an end to online rumours by announcing a new G-series compact flagship, the 14.3-million-pixel PowerShot G1X, at the Consumer Electronics Show in Las Vegas in January.

In the meantime, Sony's Cybershot DSC-RX100, with an f/1.8 Zeiss Vario-Sonnar T\* lens, was primed for a summertime debut.

Samsung announced the EX2F, a 12.4-million-pixel compact sporting a 24-80mm f/1.4 Schneider-Kreuznach lens and built-in Wi-Fi.

And Nikon revealed a new 'expert'level compact in the shape of the Coolpix P7700, a 12.2-million-pixel model with a burst rate of 8fps.

November would see the second CSC from Fuji. Like its X-Pro1 sibling, the X-E1 adopted a retro look but was smaller and included a flash.

In a glare of publicity, the world's first full-frame digital compact camera was unveiled – the Sony Cyber-shot DSC-RX1 – featuring a 24.3-million-pixel sensor and a 35mm f/2 Carl Zeiss T\* Sonnar lens.

In the autumn, the 12.1-millionpixel PowerShot G15 – sporting a 28-140mm f/1.8 lens – became the new compact flagship from Canon.

# ALS AND TRIBULATIONS

THE ACCOUNTING scandal at Olympus forced the entire company board of directors to guit after Japan's fraud squad raided the firm's Tokyo HO and investigations continued into a £1.1 billion accounting cover-up.

Speculation that the notorious Japanese criminal underworld were involved remained unproven. Three officials - including former president Tsuvoshi Kikukawa - later admitted fraud, but not before CEO-turnedwhistleblower Michael Woodford abandoned his bid to return to the company after failing to win support from key Japanese investors.

In the autumn, Sony confirmed a £400m investment in Olympus's medical and camera divisions - taking

Meanwhile, over at Kodak, a bankruptcy protection filing in the United States appeared to spell the beginning of the end for the historic maker of the Brownie camera, though European bosses at the 124-year-old brand insisted they would not be hit.

Industry experts were quick to see the irony: Kodak missing out on the digital bandwagon, despite launching the first commercially available DSLR, the DCS 100. in 1991 and pioneering digital technology since the 1970s.

The significance of the news would intensify in February when Kodak announced it was pulling out of camera production altogether.

# TECH TRENDS IN 2012

WHEN Leica unveiled a black & white-only digital rangefinder, the M Monochrom, it said it may expand the format if it was successful. So far, no other camera maker has followed suit, instead focusing on evolving technology designed to ease the sharing of photos, such as built-in Wi-Fi and Android.

Leica introduced live view and HD video to its digital rangefinder line in the shape of the 24-million-pixel Leica M, which used - for the first time - a Leica-made sensor.

But Leica CEO Alfred Schopf lamented the current inability of Wi-Fi to transfer large files quickly, suggesting that M users may have to wait a while for this technology

Yet camera makers were told to move fast or miss out in the race

to equip products with the wireless features, as 3G connectivity made its way into a camera (the Samsung Galaxy Camera) for the first time.

Others also paid attention. Canon. Nikon, Panasonic and Olympus all revealed cameras with Wi-Fi either built-in or available as an option via an adapter.

Nikon's Wi-Fi-enabled compact, the £379.99 Coolpix S800c, allowed users to download 500,000 applications from the internet using the Android operating system.

In 2012 we saw further signs that low-end compacts are paying the price for the smartphone revolution. Olympus was among those to admit it may have to stop making cheaper compacts in the wake of the competition.

The shocking experience of award

**COPYRIGHT** wrangles, corporate scandals and competition controversy added extra spice to AP's cauldron of news in 2012

Then, just as we thought it was safe to go out, calamitous breaches of photographers' rights entered the mix once again.

Meanwhile, police misdemeanours by and large took a back seat in 2012, the nature of those reported by readers merited coverage for their sheer madness

In June, The Guardian photographer Don Morley accused police in Surrey of harassment after he was guizzed over misplaced fears he and his friend Bernard Lockley had shot indecent images of a child on Guildford high street.

The men, who were both left in a state of shock following the accusation, strongly suspected

# COPYRIGHT

AN HISTORIC copyright battle that centred on an image of a red bus on a monochrome Westminster Bridge guickly became the most read news article to ever appear on the AP website. Lawyers warned that photographers who compose an image in a similar way to an existing one risk copyright infringement, in the first ruling of its kind - leaving many incredulous

In the summer, photographers were further warned that people who help set up a photo shoot may later claim copyright if a written agreement is not drawn up beforehand. The caution followed a case held at the Patents County Court in July.

On a sour note for image-makers everywhere, British photographer Mark Stothard, already exposed for grabbing copyrighted images in 2009 without permission, was up to his old tricks three years on. Stothard was branded a 'con man' and 'fake', accused of stealing other people's photos from websites such as Flickr.

# HTS MAYHEM JUST WON'T GO AWAY

# l-winning photographer Don Morley reignited fears that some officials adopt a one-track mind

that off-duty officers had acted as 'agent provocateurs', alleging that a member of the public had only lodged a complaint after the officers had stepped in. A passing lawyer, who happened to witness the drama, backed the photographers' position and, as we investigated the matter further, the incident sparked coverage on BBC radio.

It wasn't all grim, though, with more U-turns in 2012 than a George Osborne budget.

Amateur photographer Robert Patefield won an out-of-court cash settlement from Lancashire Police, having sued the force for wrongful arrest while photographing Christmas festivities in Accrington in 2009.

And freelance photographer Jules Mattsson won an undisclosed payout from the Metropolitan Police after he was stopped while taking pictures of a military parade in 2010.

In the spring, a London photographer won an apology from the Met after he was wrongly stopped from taking pictures of two police cars that had crashed into each other.

Then, after a public backlash, a school in Scotland overturned a ban on pupil Martha Payne's photos of school dinners that she had posted on a blog.

Perhaps the award for the biggest climbdown of the year, however, should go to Glasgow tube system bosses, who reversed highly controversial proposals to ban all photos from the city's underground system, after a report in AP led to mainstream media coverage and a nationwide campaign backed by Hollywood actor Alan Cumming.

But all-too-familiar petty rules continued to bite. An enthusiast felt

like a criminal when a security official banned his pictures of people ice skating at a Winter Wonderland fair in Cardiff, and a ban on the use of DSLRs at a disused London Tube station-turned-museum prompted cries of disbelief.

Reports of security guards misbehaving took the biscuit – or, perhaps, the crisp – in the case of a Golden Wonder plant in Scunthorpe. The famed snack maker was forced to apologise after security guards were filmed telling a photographer he was not allowed to take pictures of its factory.

The BBC's Look North programme was quick to pick up on the fiasco, as was photo rights campaigner Austin Mitchell MP, who quipped that Golden Wonder may have been making 'exploding bags of crisps that could be strategically dropped on enemy

lines' to use as a 'secret weapon'.

The tragic comedy continued when another hapless victim, John Harrington, was stopped by a security guard while taking pictures of a fish tank at a shopping centre in London. The official had apparently been instructed to look out for 'hostile' reconnaissance amid pre-Olympics terrorism fears.

As it emerged that DSLRs and CSCs would be banned from Olympic sporting events at Wembley, photographer Stan Green clashed with a Hampshire town mayor while trying to take photos of an Olympic torchbearer.

Even a council member himself fell victim to officialdom this year. Much to his horror, Cambridge Councillor Kevin Price was banned from taking pictures at his local shopping centre.

# **ON THE WAY IN 2013?**

The upcoming PMA and CES shows in the US will witness the first kit of the New Year

IN JANUARY, Pentax remained tight-lipped over a full-frame DSLR. However, it seems the firm's cameras will strike a rich seam of investment in the wake of the Ricoh takeover in 2011.

Fujifilm outlined details of four more lenses it plans to launch for its X-Pro1 CSC in 2013. Hiroshi Kawahara, who heads up Fuii's Product Planning operations, said photographers can expect to see a 28mm f/2.8, 23mm f/2, 70-200mm f/4 and 12-24mm f/4 lenses as part of a plan to build a stable of 'nine or ten' optics for the camera inside two years.

In 'early 2013' we can expect to see a 56mm f/1.4, 27mm f/2.8 'pancake', 23mm f/1.4, 55-200mm f/3.5-4.8 OIS telephoto and 10-24mm f/4 OIS super-wide zoom.

Meanwhile, Samsung's Digital Imaging sales and marketing vicepresident Sun Hong Lim said the firm wants to 'democratise' CSCs by making a wider range and making them more affordable. He also hinted at higher-end CSCs - but not just yet.

Future 3G Galaxy Cameras from Samsung may include a larger, possibly APS-C-sized sensor, if customers demand it, and the firm may extend Android technology to its NX range.

Nikon's general marketing manager Nobuaki Sasagaki ruled

Fuji's X-series designer, Masazumi Imai, after an interview with AP at the photokina show in September

out any immediate thoughts of a larger-sensor CSC, however, as did Panasonic, which said it had no plans to launch an APS-C-sized sensor in a high-end CSC (the micro four thirds Lumix DMC-GF3 was unveiled at photokina in the autumn).

Instead, Ichiro Kitao, director of Panasonic's digital stills camera business, said the firm would focus on 'improving the quality of our lenses'.

Sony said it was unlikely to launch

another conventional DSLR as it focused on its SLT (single lens translucent) models.

Meanwhile, in a bid to pacify its four thirds users, Olympus revealed it was working on a new camera body to 'fully utilise' the focusing performance of DSLR lenses. It is unclear, however, whether we will see a new DSLR or a mirrorless model.

At photokina 2012, Fuii officials said they were seriously investigating the possible launch of a full-frame CSC, and were focusing on the imaging sensor and processor that would be needed.

Also purposeful was Canon, which ruled out an EVF-version of its first CSC. the EOS M, saying it does not see a need in the consumer market that the camera is aimed at.

Days earlier, Sony told us it was considering the launch of a higherend, full-frame, DSLR-style camera for filmmakers and broadcasters.

Swedish firm Hasselblad shocked the photo world when it announced plans to enter the CSC market, in a tie-up with Sony. The electronics inside the €5,000 Lunar will be based on the Sony NEX-7 with a body designed in Italy.

A Hasselblad-branded DSLR is set to follow in mid-2013, and a compact camera soon after.

# **BOWING OUT IN 2012**

- Legendary Magnum Photos photographer Eve Arnold died aged 99
- Sad news reached us that Michihiro Yamaki, the founder of Sigma, had died aged 78. He was a legend of the industry and was interviewed by AP many times. His son Kazuto would take over the reins
- Tributes were paid to photographer Sir Simon Marsden, known for his gritty black & white images of mystical landscapes, Gothic graveyards and old ruins. He was 63
- French photographer Remi Ochlik died in the battlegrounds of Syria, aged 28
- Reports emerged that Antony Barrington-Brown, the photographer behind the famous 1953 portrait of the Cambridge researchers who discovered DNA, had been killed, with

Magnum photographer Martine Franck, the wife of legend Henri Cartier-Bresson, died aged 74

- his wife Althea, in a car crash in Wiltshire
- Hochova died, aged 86 Pulitzer Prize-winning German photojournalist Horst Faas, famed for his coverage of the Vietnam War, died aged 79

Czech photographer Dagmar

- E Emrys Jones, who had acted as a mentor to renowned photojournalist Philip Jones Griffiths, died aged 97
- Indian fashion photographer Prabuddha Dasgupta passed away aged 58
- Magnum Photos Martine Franck, the wife of Henri Cartier-Bresson, left the photo stage, aged 74
- Malcolm Browne, a Vietnam photographer whose 1963 image of a burning monk shocked the world, died aged 81
- Tributes were also paid to photographer Cornel Lucas, credited as one of the pioneers of movie portraiture of the 1940s and 1950s. He died aged 92

# THE YEAR IN NUMBERS

Growth in turnover at Jessops for the year to 1 January 2012

Fall in UK sales of DSLRs from September 2011-February 2012 following Thailand floods. Rise in R&D spending at Carl Zeiss

Plunge in unit sales of compact cameras in the UK for the year to May 2012

# APReview The latest photography books, exhibitions and websites. By Gemma Padley

# EXHIBITION

# Ansel Adams: Photography from the Mountains to the Sea

Until 28 April 2013. National Maritime Museum, Romney Road, Greenwich, London SE10 9NF. Tel: 0208 858 4422. Website: www.rmg.co.uk. Open daily 10am-5pm, Admission: adults £7, concessions £6, children (15 and under) £2

ANSEL Adams is undoubtedly one of photography's greatest practitioners, certainly in the 20th century and arguably of all time. A master photographer, his evocative and breathtaking American landscapes have fascinated generations of photographers and continue to intrigue. Countless exhibitions of his work have taken place over the years, but if you think you have seen it all, think again.

This exhibition at London's National Maritime Museum takes 'water' as its central theme and brings together more than 100 original Adams' prints depicting bodies of water drawn predominantly from the Ansel Adams Archive. Adams, the organisers explain, had a lifelong fascination with water in all its forms. From epic seascapes, dramatic rapids and geysers to crashing waterfalls, ponds, rivers and ice-locked

landscapes, this is the first exhibition to look at Adams' photographs of water.

Photographs on display include the first image Adams ever made, at the age of 14, plus iconic pictures such as 'Clearing Winter Storm' (above) and 'Stream, Sea, Clouds, Rodeo Lagoon, Martin County, California', and his favourite work, 'The Golden Gate Before the Bridge, San Francisco, c1932', which is thought to have hung above his desk.

# Wildlife Photographer of the Year, Portfolio 22

The Natural History Museum, £25, hardback, 160 pages ISBN 978-0-56509-317-4

IN AP 27 October, we published a feature about the Veolia Environnement Wildlife Photographer of the Year competition. If you missed it or have yet to visit the exhibition, here's a chance to snap up the winning images from 2012. The book to accompany the current exhibition that runs until 3 March 2013 at the Natural History Museum in London showcases the best entries submitted this year in all categories. Featuring some 100 images

by 80 international photographers, the subjects photographed are diverse and frequently breathtaking. In some instances, vou can't help but wonder how the photographer took the picture they did. From bighorn sheep in the snow-covered mountains of Canada's Banff National Park to lions in South Africa (above), this collection is as international, wide-ranging and inspiring as ever.

# Seduced by Art: Photography Past and Present

By Hope Kingsley and Christopher Riopelle. The National Gallery, £19.95, paperback, 215 pages, ISBN 978-1-85709-568-5

> IN A BOLD move, the London gallery is holding an exhibition that looks at the relationships between historical painting and photography. The photographs on display date from the 19th century to the present day and include work by Julia Margaret Cameron (left), Martin Parr and Simon Norfolk. To appreciate the works first-hand you really need to visit the

exhibition, but the catalogue, Seduced by Art: Photography Past and Present, is interesting in its own right. Divided into chapters that cover genres including landscapes, portrait photography and still-life, the catalogue places key paintings and photographers side by side and comments on possible links between the history of painting and photography. With approximately 150 illustrations, it is an interesting take on a discussion that is as relevant today as even

The exhibition Seduced by Art: Photography Past and Present is on show at the National Gallery until 20 January 2013. For more information visit www.nationalgallery.org.uk.

# awkwardfamilyphotos.com

**AWKWARD** Family Photos features photographs of families caught in all sorts of embarrassing poses and situations. The site was started by two friends and now receives submissions from over the world. Visitors can browse through categories such as Family Portrait, Holidays and Weddings, tittering at the misfortunes of others. It isn't particularly well designed, but if you're looking for a little light relief this site may hit the spot.

# CONDENSED READING

A round-up of the latest photography books on the market

• THE ART OF PHOTOGRAPHIC LIGHTING by Eib Eibelshaeuser. £34.50 With its impossibly broad title, this book sets itself up for a fall. It may be a sizeable tome, but unfortunately only manages to skim the surface of lighting techniques, which is a huge area of photography as any photographer will testify. Lacking direction and focus, give this one a miss. • TEN PHOTO **ASSIGNMENTS TO DEVELOP** 

YOUR PHOTOGRAPHIC SKILLS

by Amanda Quintenz-Fiedler. £15.50 A nice idea for a book, this how-to guide focuses on practical assignments with the aim of helping photographers improve essential field skills. Assignments are designed to improve metering, composition and exposure, among others, but the slightly patronising tone is a little off-putting. ● CLOSE-**UP & MACRO PHOTOGRAPHY** 

by Tracy Hallett, £14.99 If you are new to macro and close-up photography and unsure where to begin, this book may offer some useful starting points. Nicely assembled with a good balance of text and images, the book breaks down topics into manageable chunks and is clear and easy to read. • PHOTOGRAPHY **CHANGES EVERYTHING** by

Marvin Heiferman, £25 Despite its rather strange title, this collection of essays on photography covers some interesting topics and ideas. Well-worn subjects, such as photography and terrorism, and photography and celebrity, are featured, but there are many other areas that provide considerable food for thought.

### A PREFERENCE FOR BLACK & WHITE

Gemma Padley's article A legacy of colour (AP 24 November) raises the interesting question of why some iconic photographers have preferred black & white to colour. The article uses the argument that colour film was slow, although in fact, action and street photography were still possible in good light with a reasonable aperture - I was taking slides of motorcycle racing around 1960. I think there are a couple of much more important issues here.

First, there is the potentially distracting effect of colour, which traditional black & white photographers, from Cartier-Bresson to Ansel Adams and Paul Strand, found problematic. Composition in colour is a very different ball

game, but some have mastered it, such as Joel Meverowitz and Steve McCurry. See, for example, Fred Herzog's picture 'Man with Bandage's the red bin is a distraction and a false focal point. Covering the bin (perhaps also the red hotel sign) changes the composition completely, with focus now on the old lady staring at the man. However, Joel Meyerowitz's picture in the same article, 'Fifth Avenue', uses colour much more successfully, focusing on the echoed pairs of people.

Second, there is the question of why we see black & white as 'real', even with its life-colour missing. In fact, our brain has evolved to process black & white (allowing for a little toning) in a largely independent channel from colour perhaps we had early ancestors who were colour-blind? The net effect is that we can interpret the real world quite happily without the need for colour. The world we see in black & white is more highly structured in form than when

master of both. Geoff Roe (author of Photographic Composition), Cheshire

# Backchat

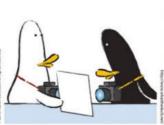

Send your thoughts or views (about 500 words) to 'Backchat' at the usual AP address (see page 3). A fee of £50 will be paid on publication

there are pools of colour to engage the eye.

So, colour and black & white are very different skills, and it is rare to find a

### What The Duck

http://www.whattheduck.net/

### As Harold Macmilllan once said, 'Let us be frank about it: most of our people have never had it so good

**WE'VE NEVER HAD IT SO GOOD** Martin Topping (AP 1 December) moans

that digital photography is now much more expensive than when he used film. In fact, the opposite is the case - photography

In 1980, I bought a brand-new (entrylevel) Pentax K1000 SLR with kit lens for £150. Earlier this year, I bought a brand-

the K-5. Add to this the fact that the K-5 is a top-of-the-range Pentax camera and it

gets even better. Whichever way you look at

it, modern cameras are significantly cheaper.

'But what about picture quality?' I hear

the sceptics say. I find that the 16-million-

film performance far behind, despite the

On top of this improvement to price

and picture quality comes the cost of the

(film/developing/printing) based on a label

envelope, making prints around 27p each.

Today, I can take more than 520 JPEGs at

a time on an 8GB SD card (cost £9) and

up to 36 prints, or for as little as 5p each

get them printed in-store for 22p each for

when ordering larger quantities. And before

anyone says, 'Oh yes, but you now need a

computer,' well, I don't if I use the in-store

facilities, so the costs are still comparable.

of pictures on each film due to the wrong

'just-take-it-again' digital system wins

Add to this that I often threw away a number

exposure or poor focusing, and the modern

I recently found on an old Jessops print

photographs themselves. In the 1980s,

per month, costing about £10 a time

K1000 being a great camera.

pixel sensor on my K-5 leaves the K1000's

new (flagship) Pentax K-5 with kit lens for £700. Using the Government's online money comparison calculators, the K1000 today would have cost £776 based on average earnings, which is 11% more than

has never been cheaper.

Graham Woodward, Nottinghamshire

Photography has never been cheap, but it is becoming more accessible all the time, especially for those who never feel the need to print!

- Damien Demolder, Editor

### **TOO MUCH NEGATIVITY**

Regarding Martin Topping's letter in AP 1 December, I cannot help but feel that he is being excessively negative about lessaffluent people being priced out of digital photography competitions. I have shots on my wall at home, blown up to 20x16in size, taken with a 6-million-pixel Canon EOS D60 that easily match the quality of those I now take with my Canon EOS 60D. So why change, you might ask? Well, purely because shooting local non-league football, I need the higher ISO capability of the more modern camera

However, if you never shoot above, say, ISO 400, then cameras such as the EOS D60, Nikon D70, Konica Minolta Dynax 7D and so on will, with decent glass, give

### **GREAT XF1 FEATURE**

Having recently been pleased to receive the birthday present of a new Fujifilm XF1, I was very interested to see Tim Coleman's review of the camera in AP 1 December. The XF1 is the modern-day equivalent of the folding 'Vest Pocket' cameras of old. However, as I am someone who particularly likes to take people shots with limited depth of field, I generally like to use cameras with larger sensors and longer focal lengths. Therefore, I have found a great XF1 feature that is not mentioned in the review: pro focus mode.

Full-frame DSLRs are great for portraits, but pretty hefty to carry around. I can keep the XF1 with me all the time and with this feature, despite its tiny focal length, still get superb shots with excellent bokeh effects. Admittedly, these are produced through the firmware merging multiple consecutive shots, but even with lively children as subjects the results can be very attractive.

Perhaps photography enthusiasts may frown on effects produced by firmware rather than purely by lenses, but curiously these people will often accept digital manipulation in post-production. I am very happy to let the camera help me achieve good results, whether by optical or digital means! **Adrian Johnson, via email** 

excellent shots for around £120, and even more modern cameras, such as the Canon EOS 30D, are available for less than £200. So don't despair, Mr Topping: unless the competition is for shots of black cats in coal cellars, you can still compete with more affluent photographers.

Nigel Cliff, via email

### PERSONALITY OVER QUALITY

Would the Duchess of Cambridge's images from a recent trip to Borneo (News, AP 15 December) get the same attention if they had been taken by a 'commoner'? Somehow I don't think so. Once again, quality gets put to the side in favour of personality. She is definitely not, nor ever will be, anywhere near the level of the late Lord Lichfield.

Brian Mcdonnell, via Facebook

### **OLYMPUS SCREEN ISSUES**

The Olympus Pen E-PL5 may well have the same sensor as the firm's own OM-D E-M5 (AP 1 December), but that won't help you if you can't see to frame and focus the subject. As I found with my Pen E-P2, the LCD screen is useless in many situations. The VF-2 electronic viewfinder is a great improvement, but you can't use it with a

flash on the hotshoe. Any serious work with flash, such as macro, requires the OM-D.

As for the obsession with touchscreens, down and dirty macro in moist conditions gets enough marks on the LCD screen of my E-P2 to rapidly make its use as a viewfinder difficult-to-impossible.

Harold Gough, via email

There are some situations in which you can't beat a viewfinder, and I suppose many of those are situations in which you won't also need flash, but the screen of the E-PL5 is much improved over the E-P2 and clear enough in all but the most direct bright light – Damien Demolder, Editor

# C BACK CHAT

Don't forget to use your camera to record memories of this Christmas, pleads AP reader Melvyn Dover

**CHRISTMAS** time for me consists of the Twelve Days and the Eve, rather than a long-lasting activity from September to the end of December. Often, it's been a time for overindulging in drink and food, for prolonged television viewing. I'm ashamed to say, it's usually been a time when I've forgotten to take photographs or video.

It's only during later years that I realised Christmas time with the family passed without me capturing the event, yet it's one of the most colourful times of the year. Why have I never taken the family putting up decorations? How many pictures have I of our Christmas tree and decorations? Or of the lights, and the rooms covered in paper-chains and lanterns? How many pictures have I taken of the wonderful meals we used to have, traditional Christmas home-cooked fare? Why did I never capture the delighted faces as presents were opened, or someone finding a sixpence (ask your Gran) in the pudding?

There was one exception, although it didn't involve the family. Once I took photographs of the Boscombe to Bournemouth walk along the seafront. On each lamp-post there were lights, motifs of Santa, Christmas trees and reindeer, as well as a chain of coloured lights. I'm glad I photographed those. Today, they've been replaced by CCTV cameras, and generations have been denied the pleasure of seeing and photographing them.

Yet family photos have been scarce. I've been trying to find an answer. Or is it an excuse? Perhaps it's because taking photographs puts me in the role of observer, when it's definitely a time for taking part. Many a time I've been the one in the family to wield a camera — and so haven't been recorded for posterity, too, even at family weddings! Perhaps there are simply too many other things to think about.

Christmas time nowadays is different. The past few years I've planned to settle in, cook a good meal and chill out. Then the sun has burst through. I've changed plan, reached for the camera and gone walkabout.

There's something about being out on Christmas Day. Almost everyone you pass speaks to you and the feeling of the day being special lingers. There's often nothing tangible to photograph – snow can no longer be relied on to make the day resemble a traditional yuletide card – but I usually find there's a robin around somewhere, and plenty of red berries against a plain blue sky. Who knows, maybe there's an icicle or two to capture.

I enjoy photographing the locale. Once I headed for a lake and took photographs at certain spots around it. Another

photographer was following, stopping in the same places and taking similar shots. A case of great minds thinking alike! In mid to late afternoon, the outside of houses blaze with decorations and flashing lights.

Have yourself a wonderful Christmas – but don't be like me. Don't let too many pass without wielding a camera.

PHOTO PRINGING YOU ESSENTIAL EXPERT ADVICE EVERY WEEK INSIGHT

# CATHAL **MCNAUGHTON**

Award-winning Cathal McNaughton has more than ten years' experience covering conflicts and breaking news for national newspapers and international press agencies. He shares his best press photographs and reveals how he captures a subject in ways that others haven't seen

To see more images by Cathal or to book a place on one of his workshops, visit cathalmcnaughton.com

To take part in a free street photography Masterclass with Cathal, send an email with your name, address, telephone number and a couple of sentences about your photographic interests and experience to appicturedesk@ ipcmedia.com

Cathal McNaughton tells the story behind this image of a man who has lived in a house without electricity for 29 years

THIS image of John McCarter, reading by a window, is part of a series of photographs. You can see more of the pictures on the blog on my website. John is in his late 70s and has been living without mains electricity at his home at Downhill, County Londonderry, Northern Ireland, for nearly 30 years. It seems incredible that a pensioner who lives so close to the prosperous Causeway Coast tourist area lives in such basic conditions. He has a gas cooker, but no fridge, and reads by candlelight during the long winter evenings. John is an incredibly healthy, fit man for his age, but the freezing winter temperatures he is living in are starting to take their toll.

I'd read about John in the local newspaper and the story appealed to me, so I was keen to talk to him. I located his house, knocked on the door and got chatting.

John told me that when he first moved into the house many years ago there was no electricity, but that he didn't mind because the simple way of life appealed to him. However, now he feels differently. Every day is a struggle for him - from the moment he gets up to the moment he goes to bed. The house stands in the shadow of a large cliff that rises above it and for long periods of the year John doesn't see much of the sun because of where the house is positioned. He explained that he has been involved in a drawn-out dispute with his landlord about connecting the property to mains electricity. The mains supply is just at the end of his garden, but while the dispute continues John remains without electricity, relying instead on coal fires and candles. I spent a couple of days with him to see how he copes, arriving early in the morning to make use of the available light

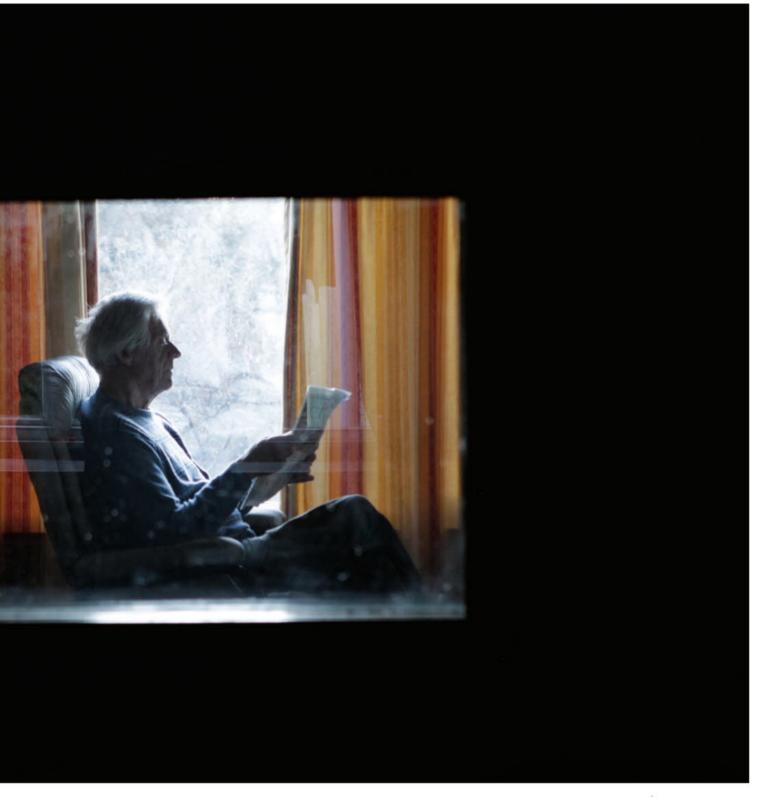

John is the perfect host and I couldn't have felt more welcome than when I arrived at his modest wooden home. I got to know him quite well over the time I spent with him, which was a period of a few weeks. I wanted to photograph his story as honestly, simply and as sympathetically as possible - to convey a sense of what it was like living in those conditions. I photographed both inside and outside the house to give a sense of the surroundings, to show how isolated John was, which was also an important part of the story.

I started by spending time with John so I could get to know him a little and get a feel for where he was living. The pictures then come more naturally. It's vital to build a sense of trust with your subject for a project like this - you wouldn't get past the door otherwise. I think it's important to be honest about what you're trying to do. Some photographers might be slightly dishonest and say what they need to say to get the pictures they want, but I think you come away with an incomplete picture if you do

this because you're forced to work in a rush in case you are 'found out.' If you take time to develop a sense of trust, you have a better chance of capturing the subtle nuances and atmosphere that complete the story.

I love getting to know a person and photographing them over a period of time. My heart lies in this type of photography - it's where I'm most comfortable. When you're working to a deadline on news assignments you don't have time to build a rapport with a

person and you might have to take pictures in a hurry, but with a longer project you have time to think about what shooting angle works best, the composition and so on. You can even come back at a later date to take the picture if the light isn't right.

The reason John is sitting here is so he can use the light to read. If I hadn't taken the time to get to know him he might not have felt comfortable enough to be himself with me while I took photographs. In the end, I was able to blend into the house and he

could just go about his business. Moments like these make the most special pictures.

When I took this picture I was actually in an adjacent room, which meant that I wasn't interfering with the scene. The house is quite unusual in that it has a small window in one of the partitioned walls to allow what little light there is through to the rest of the house. I was able to frame John within the two windows. The house was so small inside that I had to use a wideangle lens to show the interior effectively. I was shooting

using available light in a house without electricity that was very dark to begin with. I took this image using a 16–35mm lens with my Canon EOS-1D Mark IV and I was shooting at approximately 1/60sec at f/2.8 using ISO 1600. I took each shot slowly and carefully to make sure the images were sharp. To have the opportunity to shoot a story like this, where you can perhaps put a little bit of your heart and soul into the pictures, is one of the reasons why I love photography. AP

EST. 1985 - THE KIND OF SERVICE OF WHICH LEGENDS ARE MADE

### NIKON F PHOTOMIC FTN APOLLO BLACK AND CHROME MODELS

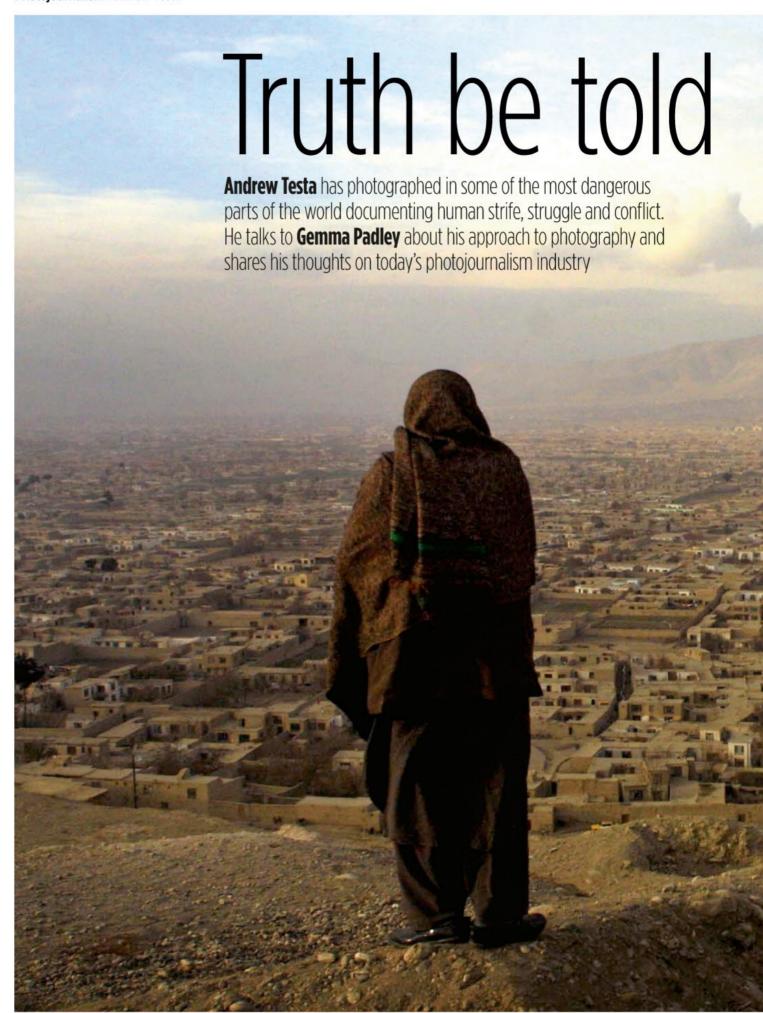

Nikon F Photomic FTn 'Apollo' body, chrome and black models

The name "Apollo" derives from Nikon's association with NASA during the Apollo space programme when Nikon supplied both test equipment and equipment to be used on flights. The APOLLO Nikon F bodies all had serial numbers beginning with 72\*\*\* and 73\*\*\* and were the very latest and best of the truly iconic F generation (incorporating improvements as a result of years of professional feedback). F cosmetics changed late in production to match the then currently produced and just introduced F2. The Apollo F was updated with

a plastic tipped F2 type advance lever and self timer, and stronger camera strap eyelets. Earlier Apollos had the standard F flash connection, later ones had the F2 type threaded PC connection. We are pleased to offer both a chrome example in new condition, body boxed (believed unused) with papers. Serial number 7205967 and black version (unboxed) serial number 7372506. POA

TO ORDER TELEPHONE 020-7828 4925

IN ONE black & white image a group of children look upwards in bewilderment through a window that is covered in bullet holes. In another, also in black & white, demonstrators clash with riders at a foxhunt in the English countryside. A third image, this time in colour, shows a child in Kosovo as she gazes contemplatively through a traincarriage window. Whether taken in Kosovo or England, in colour or black & white, Andrew Testa's photographs immerse the viewer in what is happening at that moment and present life as it is in all its rawness, grittiness and complexity.

A woman gazes out over war-scarred Kabul, Afghanistan, December 2001

Testa, a member of Panos Pictures photo agency, began his photographic career in the early 1990s working as a freelance photographer for The Observer and The Guardian newspapers. In 1999, he moved to Kosovo where he covered the war and its impact on civilians. While based in Kosovo, he also documented events throughout Eastern Europe, Central Asia and the Middle East. In 2005. Testa moved to the US. where he lived in New York for five years before returning to London, where he now lives with his family.

Splitting his time between

long-term personal projects and commissioned editorial assignments, Testa is a regular contributor to The New York Times and his work has been published in Newsweek, Time and The Sunday Times Magazine, to name just a few publications. He was a World Press Photo category winner in 2002 and has received a Getty Grant for editorial photography for his work in Kosovo.

'I knew [photojournalism] was what I wanted to do right from the get-go,' says Testa. 'I grew up with The Sunday Times Magazine and The Observer Magazine, who were publishing the work of photographers such as Don McCullin. I wanted to report on things that I felt were important. I'd look around for quirky stories and started photographing demonstrations and so on. My first picture was published in The Guardian while I was still at college in the late 1980s.

### **FILM AND DIGITAL**

Testa now works almost entirely digitally, but he started out using a Canon AE-1 35mm SLR. He went on to buy a Canon EOS D30

Left: This image, taken in March 1999, shows Albanian children looking at bullet holes left after a Serb attack on an Albanian café in Pristina, Kosovo, in which one man died and four were injured 'This attack marked a moment in the Kosovo war where fighting started to move into the city,' says Testa. 'The daily reality for these innocent children rapidly changed to one of murders and bombings and ultimately ethnic cleansing'

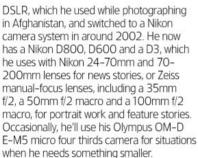

Below: Ecowarriors protest against the construction of the M65 motorway in Lancashire, with one climbing a tree to delay the project, 1997

# **ROMA BOYS IN A FOUNTAIN**

The story behind this image of some young boys playing in New Belgrade, Serbia

**1 TOOK** this image while on an assignment for *The New York Times*,' explains Testa. 'I was working on a story about the former Bosnian Serb general and war crimes suspect Ratko Mladic, who was believed to be hiding in the area in similar blocks of flats to the ones shown here in New Belgrade, Serbia. It was a depressing urban landscape. I spotted three Roma kids splashing around in a pool and they reminded me of new life and also of the vitality and joie de vivre of the Roma, who always seem to exist in their own reality, often despite their surroundings. I waited for a couple of minutes for the children to come together in the centre of the frame and took a couple of pictures. I kept back slightly as it's important for me not to interfere with or affect the scene in any way. My photography is about observation - I spend my time trying to be invisible to the subject."

'This summer. I was shooting an assignment in the Atlantic,' he says. 'I spent three weeks on a boat and the sea was pretty rough. In the end, I used the Olympus camera because my bigger cameras were being bashed around [in the rough conditions]."

### **BLACK & WHITE AND COLOUR**

Having worked with both black & white and colour film (for example, he shot with both during his time in Kosovo), Testa now predominantly shoots in colour. 'I always try to make an image work in colour,' he says. 'It's more difficult to

# Photojournalism Andrew Testa

shoot well using colour, I think.' While pondering the merits of each approach, Testa comments that some images are more suited to black & white, while others work better in colour - different elements will draw the eye depending on the medium.

'In a sense, black & white strips away the extraneous details and allows you to focus on what you want the viewer to see,' he says, 'but colour has its own expressive qualities. The image of a protestor sitting in a tree (page 23) wouldn't work as well in colour, for example. The person's jacket was bright yellow and the other people's jackets were also brightly coloured. The DayGlo jackets of the police and security guards would only serve to muddle the image and distract the viewer from the essence of the moment. This image can be seen as a metaphor for the uneven struggle of the road protesters against the authorities and the stark monochrome reinforces that.'

Conversely, the image of a Serbian girl on the train from Kosovo Polie to Zvecan (page 22) arguably works because of the colour. Shot on film, the airl's thoughtful expression, the interplay of reflections, muted colours and soft light creates an almost dreamlike quality.

'Historically, black & white was seen as

the "truthful" medium, but I think that's changing now,' says Testa. 'When you see a black & white [digital] image, you know it was probably shot in colour and converted to black & white (unless you specifically switch your camera to shoot in black & white). With the rise of heavily filtered smartphone photography apps like Hipstamatic and Instagram, the debate is moving away from colour versus black & white to one over acceptable levels of image manipulation. I think the integrity of not only the image but also of the photographer is going to become more and more important as time goes on.'

### **SHOWING THE TRUTH**

In photojournalism, there has perhaps always been a tension between creating an image that is visually compelling and one that also informs the viewer. The danger is that an image may look 'too ideal' or 'too beautiful', which could detract from its message.

'I don't think people go out of their way to make "beautiful" pictures out of tragic subjects,' says Testa. 'Certainly, in my photography I don't set out to make "beautiful" photographs of war, but there are different approaches. In one sense, you are trying to grab people's attention, but you're also trying to convey some of the emotion of that moment."

Right: 'I took this image of blackbirds flying over a Pristina suburb using a Contax G2 rangefinder while on an assignment for The New York Times in Kosovo in December 1999, says Testa. 'The picture looks monochrome, but it is actually in colour. I was covering a story on the border of Serbia and I remember it was freezing - the temperature was around -29°C. The picture was actually taken from the car window as we were driving past. I caught two frames. In a way, this image serves as an antidote to the hard-hitting images of the war in Kosovo.

# FOX-HUNTING PROTEST

# The events that led to this shot of the Beaufort Hunt charging a group of saboteurs

**IN THE** early 1990s, I spent a couple of years going out with [various hunts],' says Testa. 'This is the Beaufort Hunt, one of the UK's oldest and largest hunts, established in the late 17th century. On this occasion, there were a couple of hundred saboteurs as well as police. We were in a huge open field and the hunt appeared with their supporters. They charged through the saboteurs and a clash ensued. It was very violent and things quickly got out of control. I think I was using a 20mm lens and was in the middle of the action. As a photographer covering an event like this, you try to position yourself so you aren't in immediate danger, but I have been injured in the past."

Right: Izair Haliti, an ethnic Albanian, saves his cattle after his family compound was set alight as Macedonian forces moved through the rebel-held village. Macedonia was plunged into crisis in 2001 as rebels staged an uprising. demanding greater rights for the ethnic Albanian minority. A peace agreement eventually saw the rebels lay down their arms in return for an acknowledgement of ethnic Albanian rights in a new national constitution

Testa emphasises the need to remain objective and not become caught up in the action. 'When I was covering demonstrations as a young photographer, there would be skirmishes with police and it was all very exciting,' he recounts. 'You might be photographing with a wideangle lens and would shoot and shoot, but not necessarily come back with any good pictures. It's difficult not to be caught up in the moment, but if you can remove yourself slightly from the action and look at things from a distance, it's possible to see the essence of what you're trying to photograph."

While objectivity is one of the fundamentals of photoiournalism, is it possible to be completely objective? Surely the images will reflect to a degree the thoughts of the photographer. 'Of course, the photographer chooses what to photograph and what not to photograph, but I strongly believe in showing things as they are, in showing the truth,' says Testa. 'In a way, my work is a historical record, so objectivity is key."

Knowledge of the subject is also important. 'When looking at photographs by someone who really knows and understands their subject, and who has spent time in a

place, you can see that the images have depth,' he adds.

### **A CHANGING INDUSTRY**

In an industry that is rapidly changing, there is a need to adapt to survive and keep ahead of the game. Ultimately, the future of photojournalism is anything but clear or stable. 'When I was covering demonstrations for The Observer, the newspaper would send guys on motorbikes to collect the film and take it back to the lab to be developed so the pictures could make the papers,' says Testa. 'With the invention of modems and the development of technology, it made it possible to file images more quickly. Now everyone has a camera, and Wi-Fi enables anyone to file pictures from anywhere.

'The web is swamped with images, but there is not much in the way of an editorial process,' he adds. 'Photojournalism is in a state of flux at the moment and it is difficult to predict what's going to happen in six months or a year down the line. I do believe, though, that great photography will always have a place.' AP

# The UK's most prestigious competition for amateur photographers

# Dan Deakin Nottingham 44pts

Sun shining on louvre doors Judges say This is a very unusual image, but one that immediately stood out. We get many images of children for APOY, but this is definitely one of the most creative

In association with

# Life in Monochrome

The results are in for the final round of APOY. Here we publish the top 30 images

Agnieszka Gasiorek, of Krakow in Poland, is the winner of our Life in Monochrome round of APOY 2012. Gasiorek will receive a Samsung NX210 with 20-50mm f/3.5-5.6, Samsung 30mm f/2 and Samsung 16mm f/2.4 lenses, plus a 16GB SDHC Plus memory card, worth a total of £1,346.99. The NX210 is an advanced compact system camera with a 20.3-million-pixel, APS-C CMOS sensor. It has 8fps continuous shooting, built-in Wi-Fi for email, social networking and transfer, and an ISO range of 100-12,800 that lets you take high-speed photos even in low light. Samsung's slender, all-purpose i-Function 16mm lens offers great versatility, with quick and easy one-touch access to all your camera's manual settings.

Our second-placed winner is Daniel Portnoy, of Embrach in Switzerland, who will receive a Samsung EX2F high-end compact camera and a 16GB SDHC Plus memory card worth a total of £449.99. The EX2F has a 12.4-million-pixel, BSI (Back Side Illuminated) CMOS sensor, 3.3x f/1.4 (24-72mm equivalent) zoom lens and full HD 1080 video. It has built-in Wi-Fi for email, social networking and transfer, an ISO range of 80-3200 (up to 12,800 in extended mode) and a 3in AMOLED articulated screen.

Dan Deakin, of Nottingham, finished third in the round and wins a £250 Jessops Gift Card.

# THE 2012 LEADER BOARD

Dan Deakin is the overall winner of APOY 2012. Many congratulations to Dan, who scored consistently in eight out of ten rounds and was 102 points ahead of second-placed Andrew Blake. Charles Spencer was third, with Richard Craze fourth and Nino Cannizzaro fifth. Congratulations to all those photographers who finished in the top ten.

1	Dan Deakin	314pts	6 Derek Hansen	148pts
2	Andrew Blake	212pts	7 Michael Marsh	141pts
3	Charles Spencer	200pts	8 Ben Ghibaldan	135pts
4	Richard Craze	154pts	9 Adrian Sadlier	129pts
5	Nino Cannizzaro	152pts	10 Dusica Paripovic	129pts

# The UK's most prestigious competition for amateur photographers

**Dusica Paripovic** Bosnia and Herzegovina 42pts Ballet dancer Judges say The negative space, the placement of the dancer and the unusual crop all work together to create an aura of intrigue and mystery. It's a terrific image

Pawel Pentlinowski Ireland 41pts 'The Reader' Judges say The judges were full of praise for this charming street shot of a man relaxing outside a café

**Jayanta Roy** India 40pts 'Lost' Judges say Jayanta has chosen unconventional framing for this poignant image of a group of children, and it has really paid off

Sandra ten Zijthoff Ecuador 39pts Refugee girl Judges say The light and composition work well together in this image of a girl playing behind a curtain

Rachel von Hahn Canada 39pts Canon EOS 40D, 60mm macro, 1.6secs at 1/5, ISO 1000 Candlelit self-portrait Judges say Rachel's aim here was to capture movement, and the judges admired her use of minimal light and a long shutter speed to achieve this

Colin Woodhouse South Yorkshire 38pts Dandelion Judges say Colin has caught the dandelion at exactly the right moment to create this delicate, well-composed image

10 Chan Kwok Hung Hong Kong 38pts 'Playground' Judges say This shot is framed just right, allowing the viewer's eye to travel up the pile of rubbish to the playful child at its summit

**Emily Hargreaves** Lincolnshire 37pts Shetland cockerel Judges say The judges all agreed that this vivid silhouette really stood out among the competition

12 Alan Dufty Hampshire Atlantic Beach, New York, USA Judges say Alan's image manages to employ a wonderful compositional arrangement while still feeling natural and spontaneous

13 Jon Rolfe Merseyside 'Portrait of Lemuta and Yousef' Judges say This unconventional portrait taken at the couple's farm in Romania makes excellent use of natural light

Martin Birks Lincolnshire 35pts Bleak Midwinter' Judges say Martin has used the sparse elements of this scene very effectively, and given his image a ghostly feel

15 Sai Archana Pararasasingam India 35pts Two munias Judges say The stark diagonal lines give a sharp quality to this image of the two birds, conveying a sense of tension and vulnerability

**16** Justin Minns Suffolk 35pts 'Boat houses' Judges say The splendid reflections are what make Justin's image of the Norfolk Broads come alive

# The UK's most prestigious competition for amateur photographers

17 Juan Silva Colombia Tattooed portrait Judges say This simple but effective portrait makes intriguing use of light, shadow and white space

Motor paragliding in Porto, Portugal Judges say The cloud formations behind the silhouetted subject make for an exceptionally dramatic image 18 Ionut Visan Romania 33nts

19 Helen Norman Leicester 32pts Facial portrait Judges say The extreme dark tone of the lips provides a sharp contrast with the light on the rest of the features

20 Elaine Hagget Wrexham 31pts Canon EOS 7D, 90mm, 1/16sec at f/2.8, ISO 100
'Study of a dahlia' Judges say Elaine has created an absorbing image of this perfectly shaped pom pom dahlia

21 Kate Ferris Isle of Lewis 30pts 'Jump' Judges say Kate's humorous shot is a fantastic feat of observation and timing

Ivan Galic Croatia 30pts

Portrait Judges say Ivan uses light, shadow and an unsettlingly skewed angle to great effect for this sinister image

23 Ova Hamer Argentina 30pts Canon PowerShot A710 IS, 35-210mm, 1/640sec at f/6.3, ISO 10 Crossing the street Judges say The low exposure adds to the atmosphere of this stylish street shot

Fred Wilkinson Durham 29pts Kepier Woods, Durham Judges say This image impressed the judges thanks to its different interpretation of the round's theme

Marta Varela Portugal Rose Judges say Marta has taken a different approach to a classically beautiful subject and produced this lovely crisp image

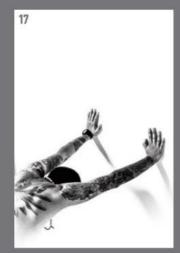

26 Junaith Aboobaker Ireland Hooded child Judges say The judges were charmed by this expressive image of Junaith's daughter after an evening car ride

27 Ratul Upadhyay India 27pts 'Innocence at its best' Judges say This delightful shot captures a moment of connection between youth and age

28 Jonathan Trim Tyne and Wear 26pts 'Captive contemplation' Judges say The inscrutable expressions on the subject's faces make this image worthy of repeated viewings

Matt Walkley Somerset 'Precious moment' Judges say The judges loved the close bonds of family depicted in this intimate, softly lit image

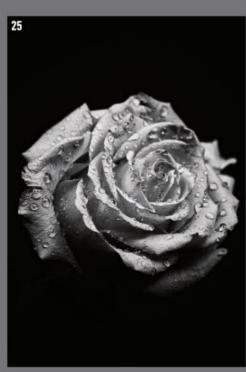

30 Richard Davies Kent 26pts Hope Street, Liverpool Judges say A judicious crop and Richard's excellent timing both add to the humour of this shot. The lines on the pavement were made by a street cleaner and then a man walked into the frame just at the right moment

# Persistence pays off

After finishing second and fifth in the past two APOY competitions, Nottingham-based **Dan Deakin** has convincingly emerged as the winner of APOY 2012. He talks to **Jon Stapley** 

LAST year, just 17 points separated Amateur Photographer of the Year winner Simona Bonanno from runner-up Lee Jeffries. In 2012, things played out a little differently. APOY veteran and familiar face on the leaderboard Dan Deakin produced a series of technically accomplished images that consistently impressed the judges and kept him in the top ten. Despite the return of old APOY faces, some of the most impressive entries yet from all over the world and plenty of tough decisions for our judging panel, Deakin's dedication and

skill eventually took him to the top of the leaderboard with a total of 314 points. Deakin wins £5,000 worth of Jessops vouchers as the overall prizewinner.

'I'm absolutely thrilled,' says Deakin, 'I knew winning was a possibility – I got in the lead early on – but I had visions of it all going wrong and me going down in the last round.'

APOY first caught Deakin's eye back in 2009. 'I entered one or two rounds randomly, and I was always around the top 30,' he says. 'I never won anything, but I looked at the scores

Deakin took fourth place in the Water in the Landscape round, with the judges saying that 'the infrared accentuates the foliage and clouds to stunning effect'

and realised that if you score well in every round, there's a pretty high chance that you'll win overall. So I entered in 2010 thinking I could win a round, and within two or three months I was top of the leaderboard!'

Deakin maintained this lead for most of 2010, but a drop-off in the last two months meant that the competition was ultimately clinched by Sean Slevin, while Deakin finished a respectable second. 'I got in touch with Sean and he's a good guy, so I lost to a worthy winner,' Deakin says. 'But I

was pretty gutted.' Deakin entered the fray again in 2011 and emerged from that tight competition in fifth place, having given the top scorers an excellent run for their money. Although that was a fantastic achievement by anyone's standards, this year Deakin was keen to do even better.

### **EARLY INSPIRATION**

'I got an SLR in 2005,' says Deakin. 'I was always interested in photography as a teenager, but I was totally put off by the cost of film.' Deakin cites his younger brother

Jacques as being a large influence on his interest in photography and his decision to pursue it as a hobby. 'He's a bit of an artist - he does a lot of painting and sculpting – and he was doing photography when I was just getting into it, so I learned all the basics from him. I got a lot of inspiration from my brother,' says Deakin.

Currently using a Nikon D700, Deakin has recently been experimenting with infrared techniques. He says that what he loves most about photography is the endless challenge it offers.

'There's always stuff to learn,' he says. 'As soon as you start shooting something new, you're right back at the beginning of that steep learning curve. And there's always something new - there are whole genres that I've never explored."

An orthopaedic surgeon by profession, Deakin doesn't get much of a chance to express himself creatively in his work, so he enjoys the chance that photography gives him to flex his creative brain.

Deakin did find some of this year's rounds tougher than others, and he says that one constant source of support has been his wife Helen. 'She screens all my entries and I ask her what she thinks,' he says. 'She's given loads of advice on each round's entry, and thinks of herself as a bit of a "photography widow" when I get a bit too carried away. She thinks all our holidays are planned around my photography, and I guess there might be a bit of truth in that!'

Top left: Deakin finished in 24th place in round 2 with his image 'Grandmother and grandson'

Far left: Round 5 saw Deakin reach seventh place with this image, which the judges described as 'delicate and compositionally interesting'

Left: Deakin shot this image of a spiral staircase in Boston, USA, for the Exploring the City round

Above: The Giant's Causeway in Co Antrim was the venue for Deakin's image in round 4

Above right: Deakin took this image for round 7 in his home town of Nottingham

#### THE COMPETITION

Throughout 2012, Deakin proved himself to be a very adaptable and consistent photographer, scoring highly in almost every round. This isn't to say that the competition was without its challenges.

'To do well in this competition, you've got to be ready for all genres,' he says. 'I actually found the woodlands round [round 9] the hardest. I don't know why this was difficult, because I do a lot of landscape work, but I must have gone out to Sherwood Forest four times and just got nothing - I

was completely uninspired.' Despite these setbacks, Deakin's entry won him eighth place in that round (see page 38).

Fortunately, Deakin remembers some of the other rounds a little more fondly. 'I quite like the spiral staircase from round 6 [see left],' he says, of the hypnotic, upwards-perspective architectural photo that won him seventh place in July. 'I was in Boston, USA, for a week and knew that I needed some APOY shots. All my best photographs come from when I'm travelling, or when I'm in a

new environment, so I had a really good couple of days with some incredible architecture. My entry was a funny photograph because it was totally unassuming: I saw this interesting staircase from ground level in a 1970s tower block. I took a few pictures of it and was just about to leave when I looked up and saw how they'd painted the ceiling orange. It was a totally unexpected shot.

Despite the far-flung location of his city shot, the photograph Deakin says he had the best time finding was actually taken on his home turf in Nottingham. 'I probably enjoyed shooting the street image most,' he says, referring to his perfectly timed shot of a man leaping through a heavy deluge of rain, which bagged him 35 points in August (see page 37). 'I'm near the city centre, so I can run into town when I see thunderclouds. It's actually pretty hard to time your arrival to get

Above: Deakin's image for round 9 earned him 41 points and eighth place

Below: The last round saw Deakin take third place, his highest position in the competition, with this shot of his son

there when it's chucking it down. I legged it in, leaving my long-suffering photography wife, and managed to get some good pictures of people in the downpour."

#### THE FUTURE

'I'll always be an amateur,' says Deakin, when asked where he'll be taking his photography next. 'But a genre I've always enjoyed is documentary. When I get a bit more time, that's what I'd like to concentrate on. I'd like to take on a personal project, develop it over a period of time and create a series of images that work together. It's the sort of thing that's never going to sell, but I can

This is something that Deakin has already been experimenting with, thanks to some fortuitous new arrivals at home. 'I've got a 16-month-old boy, and he's probably occupied most of my photography,' he says. 'I guess you could say that's been my project, although a lot of the images aren't entered in competitions. Most people probably wouldn't be interested, but it's what I enjoy shooting.' Deakin's son has featured in APOY twice this year - his hand appears in the 'Grandmother and grandson' image for round 2 (page 36) and in the thirdplaced shot for round 10 (left)

Deakin has also found himself inspired to continue with these kinds of projects thanks to his admiration for his fellow competitors. 'Lee Jeffries is an incredible portrait photographer,' he says. 'I only got into his work after APOY. That sort of work is the kind of way I'd like to go, I guess, although the fun of it is also that you don't quite know where you're going.' Indeed, Deakin seems quite content that his photographic future is not set - when asked if he'll ever be returning to the APOY arena, his response is a cryptic, 'We'll see...' AP

# 2012 FORUM WINNERS

AP's forum competition offers our readers a monthly opportunity to showcase their most creative and dazzling images with the forum community. Here we present each month's winners

**INTERNET** forums can offer the opportunity to share information, give advice and, in the case of our own web-based community, show of your well-honed photographic skills.

Each month our competition presents our forum members with a 32GB Micro SD card with SD adapter for the winner, and 8GB cards and adapters for the second and third places. Second and third places also get an 'Amateur Photographer Loves My Pictures' mug.

January Cold As Ice

#### Derwentfrozenwater

#### Benchista

Benchista has created a wonderful picture that shows us an amazing view, in amazing conditions and in amazing circumstances. You can feel the cold just from the coolness of the cyan/blue sky, and the blue shadows and mist in the mountains

further that impression.

The blues seem so much cooler because of the warm colours of the sun on the frozen lake in the foreground – cover it over with your hand to see what we mean. It's a long thin picture, but it doesn't need cropping top or bottom, as the stripes of blue, grey and peach are very comfortably proportioned. And our favourite bit? That long shadow behind the man on the ice.

Great shot, Benchista!

February Contre-Jour/Lit From Behind

#### Flaming Hair BrianWall

What an absolutely stunning picture. The colours are incredibly powerful. Technically, of course, it is dreadful, with all that lost detail and pixelation, but had it been crispy and detailed it would not have possessed half the charm or the same degree of drama.

The girl's hair is alight with the fire of the setting sun, and the wind blows the flames across the frame. The sea in the background is like molten lava flowing at her feet. The colours are so intense you'd be forgiven for being unsure if this was a vision of heaven or of hell, although we'd be inclined to believe it is the former.

Just brilliant, and the kind of picture you can go

back to again and again.

#### March Still Life

#### Ghirardelli

Betinalap

You'd have to be lactose intolerant to not be drawn to this image. You can taste what those things would be like in your mouth, and smell what your nose would experience were you to place your nostrils close to the warm, melting, soft, gooey slabs.

The focus ensures we maintain our attention at the action-end of things, as if the draw were not strong enough already. And the softening into the distance delivers a faint hint of romance. The plain background gives us nothing with which to distract ourselves, and the clever backlighting aids depth and gives a sense of place rather than pure, factual studio.

**April** In The Garden

#### **Spring Sunshine**

lanJTurner

This is the kind of picture that is so great you think it must be constructed. The arrangement of the heads, and the perfect depth of field that makes the stamens stand out but which still allows the defining shapes and colours of the daisies to be described, look very organised. The perspective is close-to, as from a standard lens that allows big foregrounds and exaggerated differences.

The colours, pastel but bold at the same time,

The colours, pastel but bold at the same time, are simultaneously vibrant and relaxing. Their distinctive characteristics are strangely familiar – unusual and typical in one. Ian JTurner has clearly thought about what he wanted to do, and has done it in a deliberate manner. It's very good.

May Something Small

#### **Clematis Head**

Devon\_Eric

This is a pretty amazing shot. It's a great subject, for sure, but as we all know that doesn't make a picture on its own. It is a combination of great lighting, a good choice of background and blue tone.

good choice of background and blue tone.

We're pleased Devon\_Eric didn't decide to make the background completely black as that would have introduced a harshness to the image. Having a moderate grey works very nicely, providing just enough contrast to make the subject stand out, but without overdoing the contrast to make the shot dramatic. The light from behind creates that bright furry edge, as well as the darkness in the core of the head, and that catchlight on either side of the stem prevents it disappearing into the background.

June Non-Human Life

# Life? Certainly not as we know it, Jim

Devon Eric

We loved this picture from the first moment we We loved this picture from the first moment we saw it. For us, it conjures up images of strange sea creatures, perhaps the distant cousins of jellyfish, and red blood cells, photographed with microscopic precision. But that's not why we like it. Its appeal lies in its ambiguity. It's not entirely clear what the subject is but whatever it is, it is mesmerising. The glistening blood-red colour, what appear to be splashes from the top of the objects and mesmerising, swirling patterns all come together to form a compelling image. come together to form a compelling image.
Technically strong and nicely lit, the allure of this image is in its abstraction.

#### **July Travel Journey** Marty G

This image is uncomplicated, unfussy and like the sketches Bert makes in the film Mary Poppins, makes us want to leap into the picture and join these travellers on their adventure. We're used to seeing landscape images shot in a horizontal format, but fewer are shot vertically – and successfully. One of the main strength's of this picture is Marty G's decision to shoot vertically so the people are at the bottom of the frame. They are perfectly placed in the centre and the light falls on them in such a way as to highlight their expressions and gestures. We, the viewers, want to follow the people beyond the edge of the frame and it is this impression of motion that is the photograph's key. is the photograph's key.

This image stood out straightaway. The expressions on the children's faces – their sense of anticipation, determination and focus – is palpable. It's unclear where this image was taken, but its suggestion that these children may be Olympic champions of the future is a clever take on the theme.

From a technical point of view, the lighting is great

and the exposure spot-on. The variety of tones and shadows on the figures, coupled with the shallow depth of field, helps to give the image depth. It's good how Devon\_Eric has crouched down slightly to the children's level to take the shot, which draws the viewer into the scene, and we like how he has used the surrounding figures to frame his main subject.

#### September Leaf

#### New leaves

RexK's picture is a particularly strong example of backlit plants and flowers. There is something very delicate about the lighting that grabbed us straightaway. You could be forgiven for assuming it was taken with natural light and the way the light illuminates the reds, pinks, oranges and yellows of the leaves is fantastic. The light also accentuates the vein patterns of the leaves to interesting effect.

It may sound silly, but it is a moving image.

There is something quite touching about the scene – a flourishing plant against a dark, menacing background. In this way, there is a kind of story at play here that you don't often find with plant images. It's a strong and worthy winner.

#### October Above Your Head/Looking Up

#### Shinjuku, Tokyo

Without the bird this image would be sorely lacking and not half as striking as it is – the bird anchors the picture and provides a vital focal point. Did Yebisu find this scene, frame the shot and then wait for the bird to fly into the frame, or was it was a happy coincidence that the bird appeared?

This is an excellent image and it is clear that a lot of thought has gone into the composition's design – the interplay of the light and the material of the buildings, and the buildings' leaning angles, for example. We also love the traces of grain you can see in the buildings and sky, which contributes to the image's authentic, timeless feel, and the subtlety of tone throughout.

#### **November** High ISO

#### Outdoors Late-Night Concert Crowd Mike\_Morley

It's often difficult to pinpoint exactly why an image catches your eye, but this one does for a couple of reasons. First, the silhouetted figure towards the left of the scene commands the space so well without being overbearing. Even though he is a silhouette he is a very strong presence, indeed the focal point of the picture.

The light source positioned neatly above him in the top left-hand corner is another compositionally strong feature and draws the eye first. The golden light gently outlines the gaggle of people in the image. The use of light here is super – it is as much a character in the scene as the figures themselves. It's a very interesting winner for November.

### **2013 THEMES**

Taking part in a light-hearted contest like the monthly AP forum competition is great fun, inspiring and can help you get a bit of direction into your photography.

Here are the themes for next year, so you can plan ahead.

Visit www.amateurphotographer.co.uk/ forums for a full briefing.

January	The Colour of Night	
February	The City Up Close	
March	In the Shadows/Light and Dark	
April	Framing the Shot	
May	Looking Down	
June	Seeing Double/Reflections	
July	Square Format	
August	Human Wildlife	
September	Reach for the Skies	
October	The New and the Old	
November	Wild World/Animals and Insects	
December	Winter Wonderland	

# Power to impress

Produce vibrant, lifelike prints with the PIXMA PRO range. With a choice of either a next generation 8-ink system, or up to a 12 ink LUCIA pigment system, whichever model you choose will provide phenomenal photographic reproduction. The advanced monochrome printing technology means great results aren't limited to just full colour images. Produce prints up to 14" wide on these professional quality A3+ inkjets, and give your images the astounding finish they deserve.

# VOTE FOR YOUR FAVOURITE RETAILER

When you're buying a camera or any item of photographic equipment, the service you receive is as important as the price you pay. Whether it's informative buying advice or, in the case of online retailers, swift delivery and equally swift action if things go wrong, good service is a precious commodity that should be shouted from the rooftops. That's where the *What Digital Camera* and *Amateur Photographer* Good Service Awards comes in, by recognising and rewarding those retailers who go that extra mile. There are three categories: Best Online Retailer, Best High Street Independent Retailer and Best High Street Multiple Retailer. So PLEASE rate the service you received, and help us to reward the retailers that deserve it.

#### WHAT YOU SHOULD LOOK FOR

THE GREAT thing about abstract images is that you don't have to live in one of the country's great beauty spots or national parks, as the material you need is all around you. Great subjects can be found in your local park, woodland and even in the garden.

The edges of lakes, puddles, streams, leaves, dead seed heads, snow, frost and ice are all ideal things to photograph. I also use objects from around the home or bought from online auction websites, which I then freeze and photograph.

As with most photography, light plays an important part in really successful images, which is another reason to go out early. It is the time around sunrise, when the sun is low in the sky, that the light is soft and warmer in colour than later in the day.

As well as interesting objects to photograph, try to look at how the sun is lighting the object. Catching your subject in the right light can make all the difference. Sometimes waiting for a few minutes for the light to reach an interesting scene or even shading the subject can really improve your image.

As you walk, look for interesting shapes and patterns, and keep an eye open for textures and attractive colours. You are looking for details, so take your time and explore carefully.

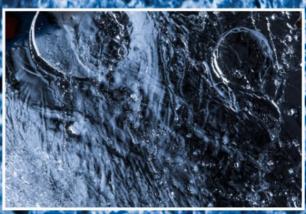

Everyday objects can be transformed in winter. Rusty corrugated iron panels, cobwebs, the bark of trees and even greenhouse glass encrusted in frost can hold wonderful ice patterns. Try spraying water on some glass or a mirror and leaving it outside on a frosty night. Another intriguing subject is frost on car bodywork and windows – the colour of the paint can make the frost patterns look amazing.

'As with most photography, light plays an important part in really successful images'

#### THE RIGHT EQUIPMENT

I USE a tripod, remote shutter release and a range of lenses for my abstract images. My most used lenses are a Canon 100mm macro and 24-70mm. Longer lenses work better for me because I like to get in close and fill the frame with detail, excluding anything that can distract the eve. I always take a polarising filter that can help to saturate colours and alter reflections. Don't feel you need an expensive DSLR to make really good winter abstracts. Compact cameras excel at close-up photography and have amazing depth of field capabilities. Select the macro mode (usually symbolised by a tulip icon) and you can get really close to your subject. Move the camera close. rather than using the zoom, to get

the best images (it still pays to use a tripod, even with compacts). Compacts will often allow you to get the lens to within a few centimetres of the subject for some very dramatic images. If your compact allows you to shoot in raw format, that will give you greater latitude in processing your images later. Although these cameras are described as 'point and shoot', don't be tempted to take that approach. Careful attention to composition and light will elevate the image above the average.

Even smartphones can be used. I went out for a walk with just my phone and took the images above in the early morning frost. I use an app called Pro Camera that allows you to adjust the exposure independently of the focus point, which is very useful.

shoot abstracts in the comfort of your own home. When I go out for a walk, I take some polythene bags and plastic tubs (take-away and margarine tubs are perfect) and collect objects lying on the ground, such as leaves, seed heads, shells and pebbles. Then I head back home to add a touch of winter to my finds.

I use a few different techniques to add the winter look. Try spraying objects with a flower mister and then placing them in the freezer to freeze the individual droplets. Alternatively, you can leave objects outside in an exposed area of the garden on a frosty night. By morning, they will be frozen and ready to photograph.

#### TECHNIQUE

WHEN working outside, and especially in the cold, it is important to keep warm. If you begin to get cold your concentration will wane and the quality of your images will suffer.

Often you need to work quickly as the winter sun can soon raise the temperature just enough to start melting frost and snow. A tripod and remote shutter release will allow you to get excellent depth of field by using narrow apertures to achieve tack-sharpness.

Position the camera carefully, so it doesn't cast a shadow on your subject.

Using objects from the freezer also requires speed. I get all my kit set up in advance and only bring each object out when I am ready to start shooting. Once it starts to thaw, I put it back in the freezer and bring out another.

#### CONCLUSION

MAKING abstract and macro images in winter can be absorbing, creative and very rewarding. Being able to work close to home is a great way to fit your photography around your work and time with the family. The techniques expand our skills as photographers and the results can be captivating. You might even find yourself wishing the winter would hang around for longer.

### FREEZE FRAME

If you want to photograph something different, try freezing an object in ice. In this case, a sea horse from an online auction site makes a fantastic subject

IF THE weather's mild and there's no snow or frost, you can improvise by freezing an object yourself. In the example here, I used a preserved sea horse that I found on an online auction site.

First, place the object in a translucent plastic tub, half-filled with water and put it in the freezer. During the freezing process, break the ice and refreeze it a couple of times. This will add bubbles and cracks into the ice giving it a more interesting texture.

Once you are happy with the look of the frozen object, place it on a window frame. I used a north-east-facing window as the light is bright but soft in the mornings, which is ideal for macro work.

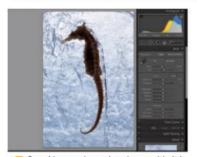

Mount your camera on a tripod. I used my Canon EOS 5D Mark II with 100mm macro

lens, and made sure the lens was parallel to the subject to make it easier to get good depth of field. When working with a macro lens, depth of field is critical and if the lens isn't parallel with the subject some areas of the image can easily lose sharpness

In this case I set the camera to ISO 100 for a noise-free image and selected f/16 to ensure good depth of field, which required a 13sec exposure. I avoid using flash whenever possible, preferring the beauty of natural light. I use live view to manually focus the lens, zooming in to 5x on the screen to see clearly as I focus.

Use the histogram to get the right exposure. I work in manual and, having chosen my aperture, I check the histogram after each shot. I slow the shutter speed down until I get a histogram that is as close to the right-hand edge of the graph as possible without it touching. This gives me the largest possible raw file my camera can produce, with lots of detail in the shadows, enabling me to maximise the quality of the final image in postprocessing (see below).

Once I have an image I am happy with, it is time to begin processing the file. I use Adobe Lightroom for most of my work, with some final touches applied in Photoshop The image above shows the unprocessed raw file in Lightroom straight out of the camera.

The first step is to crop the image to remove any distractions around the edges. You will also see I have rotated the image a little to get the sea horse upright. Objects often move a little during freezing (although a carefully placed blob of Blu-Tack can help secure them)

The next step is to make some careful changes to the sliders in Lightroom's Basic panel in the Develop module. You will see from this screenshot that I have moved the blue/yellow white-balance slider a little to the blue side to give the image a slightly colder feel. I have lifted the Shadows and Highlights sliders to brighten the image and bring out the detail in the sea horse's body. A slight boost to Clarity, Vibrance and Saturation has boosted the colour and crispness of the image. The next step is to move it into Photoshop.

In this screenshot you can see that I have added a Curves layer and adjusted the curve into a very gentle 'S' shape to add a little contrast. I have also used the Clone tool to remove a distracting crack in the ice that ran close to the back of the sea horse. After some gentle sharpening, the image is complete.

# The stuff of dreams

**Tim Walker** is one of today's most exciting and influential fashion photographers. **Oliver Atwell** takes a stroll through his latest exhibition

**FASHION** photography and tableaux imagery often go hand in hand. Flick through the pages of magazines such as Vogue and Dazed & Confused, and the garments on display almost seem to play second fiddle to a hinted-at story and narrative that threatens to spill out of the frame to reveal plot turns and character developments. Take a look at the beautifully arranged images of Sarah Moon or the extravagantly strange work of Paulina Surys and you'll get an idea of the potential of this elastic genre.

Tim Walker: Storyteller is a huge event in the photography exhibition calendar. It's not often that these works are collected into one gallery and rarely in such an impressive

space as London's opulent Somerset House. Walking through its corridors, it quickly becomes clear why this environment is the perfect place to view Walker's images. The luxurious architecture and high ceilings look almost as if they have been projected right from the psyche of Walker's romantic mind. In fact, you almost begin to suspect that the entire building was constructed just to house the dreamlike imagery held within.

The first thing you notice when viewing the exhibition is just how prolific Walker is - his output is vast and the walls are lined with countless examples of his imagery. At every turn Walker's photographs vie for space, but crucially they never seem to clash. Yet you won't find Walker's images just on the

Above left: Giant doll kicks American fashion model Lindsey Wixson, Northumberland. 2011

Top right: **Alexander** McQueen with skull and cigarettes, London, 2009

Above right: One of the life-sized props used in Tim Walker's images

walls - that would be far too conventional. The gallery space has also installed several wooden crates, many of which are bursting at the seams with straw, as beautifully charming and makeshift platforms to support the photographs.

Walker's work spans several styles, from the grand fairy-tale imagery he has become known for to the simpler portrait images that haven't had quite as much exposure. Of these, perhaps the most fascinating is his portrait of the late fashion designer Alexander McQueen (see image, top). It's an unfussy photograph, but one that carries a feeling of quiet melancholy - something that is, of course, brought to the fore due to the designer's death in 2010.

Yet it's the eye-popping visual feats that people really know Walker for and these are in abundance. It can be overwhelming at times attempting to absorb each and every one of these images, and naturally some are stronger than others, but for every weak image there are plenty more to keep your imagination captivated.

One of the most intriguing questions that could be raised about these pictures is just how much of it is really Tim's work. These

photographs are the result of collaboration between lighting teams, set designers, fashion designers, models and the photographer. Perhaps it's easier to think of Walker as the director and cinematographer of his own films. Just as in cinema, it is the director's endeavours we see on screen, and so it is here. These images are undoubtedly Walker's personal vision.

Something that Walker's photographs have often been accused of - in fact, something that much fashion photography is accused of - is that the images are all surface and no depth. However, that is to miss the point. Walker's photographs are in one measure an exercise in extravagance and in another an attempt to create a hypnagogic narrative that can carry off the viewer's imagination into a whole new (and largely artificial) dreamlike world. Yes, these images are superficial, but it's no more superficial than creating an atmospheric landscape image or one of a native creature in the African plains. At the end of the day,

they are simply beautiful to look at.

One of the most noteworthy aspects of the exhibition is the decision to include a handful of the life-sized props that Walker has used in some of his images. In one of the rooms, sections of a Second World War Spitfire (see opposite page) crowd the space like the sole members of an industrial elephant's graveyard. In another, a huge swan-shaped raft takes centre stage.

It's clear why the curators imagined that the inclusion of these items would appeal to gallery visitors, and each item is never less than intriguing. Yet it's difficult not to feel that seeing these objects in the flesh somehow strips away the magic of the images. It's a peek behind the scenes and, as a result, breaks down the illusion of Walker's dreamy imagery. Much like watching the behind-the-scenes footage of your favourite film can break the cinematic spell, here too we have a similar revelation that risks grounding the images in reality. That said, it's difficult not to be more than

Malgosia Bela and five guardsmen, Glemham Hall, Suffolk, 2009

a little impressed when faced with the gargantuan doll that awaits you at the exit. It's a prop so huge and intimidating that one almost fears being snatched away and carried off to some demented and inescapable playhouse.

Another bugbear is the inclusion of text within the exhibition. Artist statements are troublesome at the best of times, but when reading Walker's thoughts and justifications for his work it can often be difficult to know whether he is being serious or, most worryingly, somewhat self-regarding. The images really are strong enough to stand up by themselves and it's perhaps best to let them do the talking.

While this style of imagery may not appeal to every reader, Walker's exhibition is still one to keep in mind. The images are a genuine wonder to behold, and if you're going to dip your toe in the world of fashion photography you might as well do it in the most extravagantly decorated fountain you

Tim Walker: Storyteller is on show until 27 January 2013 at Somerset House, East Wing Galleries, East Wing, Strand, London WC2R 1LA. Tel: 0207 845 4600. Website: www. somersethouse.org.uk. Open daily 10am-6pm and until 9pm on Thursday 20 December (24 & 31 December 10am-4pm, 25 & 26 December closed, 1 January noon-6pm). Free admission

# Amateur Photographer's... ICONS OF PHOTOGRAPHY

ICONIC PHOTOGRAPH I PHOTOGRAPHER I CAMERA

# Boulevard du Temple

It is scratched, battered and faded in places, but **Louis Daguerre's** landmark photograph of 1838 contains the first known image of a person, writes **David Clark** 

**IN THE** mid-1830s, two rival pioneers of photography were, unknown to each other, both attempting to create a method by which they could make a permanent image using a camera.

In Britain, William Henry Fox Talbot (1800–1877) experimented with his 'photogenic drawing' process from 1834 onwards. In 1835, he had made what is now considered the world's oldest photographic negative – a picture of a latticed window at Lacock Abbey in Wiltshire – but didn't make his findings public.

Meanwhile, in France, Louis-Jacques-Mandé Daguerre (1787-1851), an artist and physicist, was developing ideas that he had discussed with his business partner Joseph Nicéphore Niépce, who had died in 1833.

Niépce had successfully made the heliograph 'View from the Window at Le Gras' in 1826 (see AP 24-31 December 2011), a positive image recorded on a sheet of pewter plate sensitised with bitumen of Judea, following an eight-hour exposure. Daguerre was striving to create a process that was simpler, required shorter exposure times, and produced sharper and more detailed results.

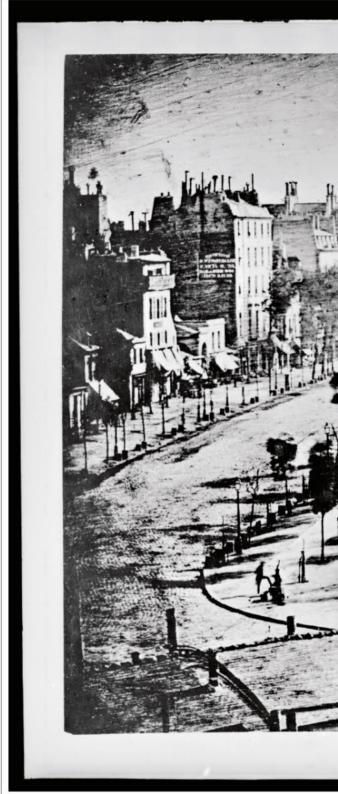

By 1837, Daguerre had developed the process later known as the daguerreotype, a direct positive image recorded on copper plate coated with a light-sensitive compound, silver iodide. The image was

developed by applying heated mercury vapour to the surface and then made permanent by removing excess silver iodide with hot salt water.

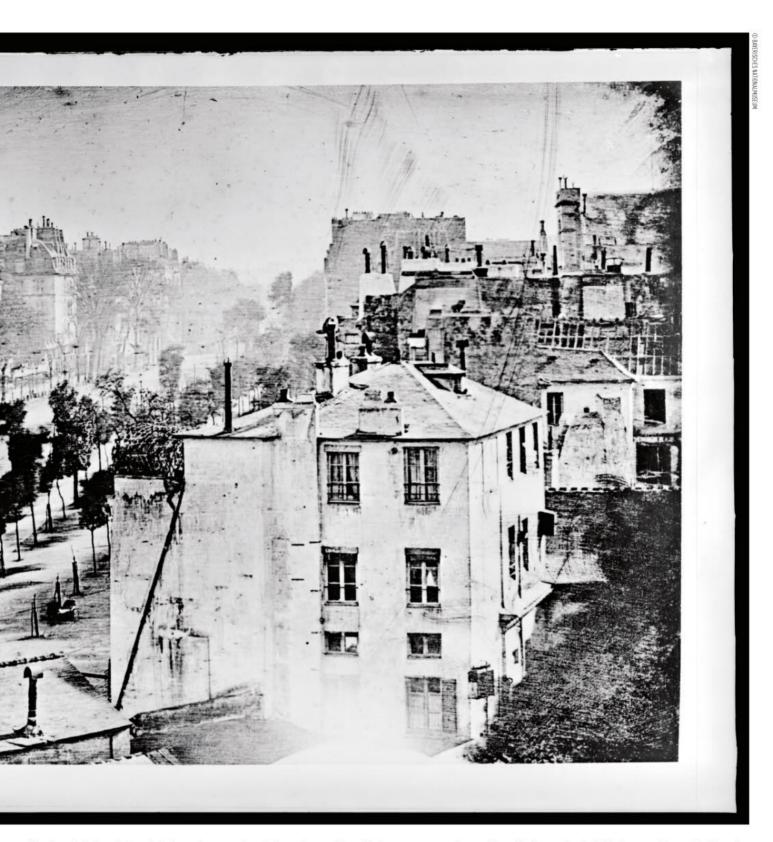

Images produced in this way required an exposure time of 10–20mins and were laterally reversed. Daguerre said that the first image successfully produced using this process was his 1837 still-life image 'L'Atelier de L'Artiste' ('The Artist's Workshop').

Despite this success, Daguerre was unable

Above left: Louis Daguerre, photographed c1845 by Jean Baptiste Sabatier-Blot to attract commercial sponsorship for his invention. Instead, he decided to announce it at the French Academy of Sciences on 7 January 1839, although he didn't reveal the details of the process. Members of the Academy subsequently examined examples of Daguerre's work at his studio and declared the daguerreotype an invention of national importance.

One of the images Daguerre had produced by this time was the image titled

'Boulevard du Temple', made in the spring of 1838 from the vantage point of his Paris apartment. Daguerre made at least three versions of this street scene, but the most successful was the one produced at 8am on a bright, sunny day.

The camera he used was a light-tight outer wooden box with a lens on the front and an inner box containing a slot for a sheet of ground-glass plate at the back. Behind it was a mirror at an angle of 45°, on which

the photographer could see the image projected by the lens onto the ground glass. Focus could be adjusted by moving the inner box forwards or backwards. When the image was sharp, the photographer replaced the ground glass with a 6.5x5in sheet of lightsensitised copper plate for exposure.

Despite the difficulties of using this equipment, the resulting street scene was detailed and well composed. The aspect of the image that particularly excited those who saw it was the figure clearly visible in the bottom left-hand corner. He is thought to be the first person ever photographed.

This daguerreotype was seen in March 1839 by the American inventor Samuel Morse, who visited Daguerre in Paris. He described it in a letter to the New York Observer: 'Objects moving are not impressed [on the plate],' he wrote. 'The Boulevard, so constantly filled with a moving throng of pedestrians and

Above: Boulevard du Temple, Paris, photographed by Daguerre on a spring morning in 1838

The first commercially available daguerreotype camera, made by Alphonse Giroux of Paris, c1839

carriages, was perfectly solitary, except an individual who was having his boots brushed. His feet were compelled, of course, to be stationary for some time, one being on the box of the boot-black, and the other on the ground."

The man's ideal positioning in the frame, plus the necessity of him being still for the majority of the exposure (at least 10-15mins), has led some commentators to speculate that Daguerre arranged for him to stand in that position.

Morse, himself an accomplished painter, was highly impressed by the fruits of Daguerre's invention. 'The exquisite minuteness of the delineation cannot be conceived,' he continued in his letter. 'No painting or engraving ever approached it.' He enthusiastically pronounced the daguerreotype 'one of the most beautiful discoveries of the age'.

Later in 1839, the French government acquired the rights to Daguerre's invention in exchange for lifetime pensions for Louis Daguerre (who was annually paid 6,000 francs) and Nicéphore Niépce's son, Isidore (4,000 francs). Finally, in August that year, the government announced the invention as a gift 'free to the world' and published full details of the process.

Sadly, fewer than 25 of Daguerre's originals exist today. The majority of his work, including notes, research and experimental plates, was destroyed by a fire in his

laboratory in March 1839.

Later that year, the 'Boulevard du Temple' image was sent, as part of a triptych of daguerreotypes (which included another of Daguerre's images of the same street) as a gift to King Ludwig I of Bavaria. The triptych later became part of the collection of Bavaria's National Museum.

In the 1970s, while the images were on loan to the Munich Photography Museum in Germany, it was noticed that they were becoming badly oxidised. However, an 'expert' attempt at cleaning them only resulted in the remaining details of Daguerre's original images being damaged beyond repair

Fortunately, the American photo-historian Beaumont Newhall had made copies of the originals in 1936 for an exhibition at the Museum of Modern Art in New York. and the 'Boulevard du Temple' images we know today are facsimiles created from Newhall's copies.

While Daguerre's images caused amazement at the time they were first revealed, the daguerreotype was a shortlived process and had almost disappeared by the 1860s. Fox Talbot's rival calotype process, which produced a negative from which positive images were made, proved more durable. After its introduction in 1841, it went on to form the basis of the photographic process until the end of the 20th century, AP

# **INTERFIT** EZY-FLO LIGHTING KIT

No experience necessary! The Ezy Flo kit provides an instant continuous light source to allow you to create simple but fantastic studio pictures with any camera. No flashmeter or reflectors necessary this comes with 2x stands, EZY FLO heads with built in softboxes.

#### **Studio Equipment**

Setting up a studio has never been easier, thanks to our comprehensive range of equipment to add the professional touch to portrait and product photography.

Ideal for either the keen amateur or the professional on the move this near-daylight lighting kit is easy to set up and comes with an instructional DVD to help get you started.

To set the kit up all you need to do is push up the softbox, attach the lighting units and place the heads on the stands. All that's required on-camera is to set White Balance to Daylight and set the ISO to 400 or above.

#### Includes:

2 Head Kit with bulbs 2x Lighting Stands 1x Instructional DVD 2x Ez fit Softboxes 2x Four Way Adapters

Only £149.95

SIGMA 18-250<sup>mm</sup> F3.5-6.3 DC Macro OS HSM

For Sigma, Canon, Nikon, Sony and Pentax Supplied with Petal type lens hood High performance, ultra-compact superzoom lens for APS-C digital cameras.

This high zoom ratio lens is designed exclusively for digital SLR cameras and incorporates Sigma's optical stabilisation technology. SLD (Special Low Dispersion) and aspherical lenses provide excellent correction for all types of aberrations. High image quality is assured throughout the entire zoom range. Sigma's newly developed Thermally Stable Composite (TSC) allows for a more compact design and the HSM (Hyper Sonic Motor) ensures fast and quiet auto-focusing. This lens has a minimum focusing distance of 35cm and a maximum magnification ratio of 1:2.9, making it perfect for close-up photography.

Compatible with APS-C digital SLRs only

Looking back at Kodak

AP's technical team looks at how **Kodak**, the most iconic of all photographic brands, has evolved over its lifetime to meet the needs of photographers

FOR MORE than five generations, Kodak has been a brand trusted by photographers all over the world. Whether you were taking holiday snapshots or grand large-format landscapes, Kodak supplied the film and the cameras that allowed you to capture it.

The key to the company's success was that it evolved to meet the needs of photographers, creating and embracing new film types and formats, as well as developing cameras for every budget in which to use them. The Eastman Kodak Company of New York, founded by George Eastman in 1892, originally sold coated photographic plates, then went on eventually to produce APS cartridge film and even one of the first DSLRs. However, a key moment in Kodak's history came in 1900 with the

launch of the iconic Box Brownie camera. The low-cost cardboard camera and its film made photography accessible to the general public. It also introduced the concept of customers receiving a free film every time a film was returned to be developed. This is a legacy that continues in some stores today.

Kodak has fallen on hard times recently, perhaps due to a misguided response to the digital age. However, the name and its distinctive yellow and red branding is evocative for many photographers.

Using six Kodak cameras spanning more than eight decades, AP's technical team looks at just how Kodak has managed to meet the demands of the professional, enthusiast and mass-market photographers.

# **Entry level**

When released, the Brownie Six-20 Model C and Advantix Preview were both affordable and simple to use, as Tim Coleman explains

KODAK has created countless budget-level cameras and is credited with bringing photography to 'the people'. There is no better example of this than the camera that started it all - the Box Brownie. The first mass-production version was announced in 1900, and cost around \$1. With millions of units sold since, the Box Brownie is the best-selling camera line of all time. For many, a Brownie was the first camera they owned.

In 1996, Kodak introduced the Advanced Photo System (APS) film format, calling it Advantix. This was an attempt to offer a simpler alternative to

the well-established 35mm film format. APS cameras offer three aspect ratios: 16:9, 3:2 and 3:1 panorama, but the film area is approximately 50% the size of 35mm and exposure information can be recorded onto the edges of the film. Ultimately, not many took to APS and the film is already discontinued.

#### IN USE

The Brownie Six-20 Model C shown above was produced between 1946 and 1957, although the first Six-20 version was available in 1937. The camera uses the long-discontinued 620 film, although

Preview

Below left: The softness of the **Brownie lens** naturally suits subject matter such as this castle. The Preview's original image has greater contrast, but less obvious detail in shadow areas

the widely available 120 film (which is the same size) can be respooled onto the thinner 620 film spools (see AP 26 May supplement). With practice, it takes just a minute to load a film onto the removable film holder. The single-blade shutter has two speeds, bulb and 'snapshot', and judging from exposures the aperture of the fixed lens is f/11. The camera features waist-level finders, one for portrait and one for landscape orientation. Accurate composition takes time and a steady hand.

Kodak's Advantix Preview was released in 2000, with a flip-up lens cover that includes a built-in 'T' flash and turns the camera on when opened. A built-in viewfinder is linked to the 25-65mm. zoom lens and aspect ratio. The standout feature, though, is its small digital display. This allows the user to 'preview' the last image captured on the film, so failed frames can be marked 'don't print'.

Loading an APS film is very quick because the film canister is taken on by the automatic winder. Once the film is developed, it is stored within the original container. Higher-end models like the Preview allow a 'mid-roll change' to switch to another film, whether from colour to black & white, or to use a different ISO rating. This is the sort of convenience at the press of a button now taken for granted in digital cameras. Once the mid-roll film is placed back in the camera, it is automatically returned to the correct frame. Film is still available, with ISO 200 and 400 the most common.

# Conclusion

THE BROWNIE Six-20 Model C works as well as the day it was made, which is more that can be said for the Advantix Preview. Fortunately, though, I had two samples because the lens mechanics of one failed. Both cameras are point-and-shoot. Although the Preview offers the convenience of autoexposure, good exposures are still possible with the manual Six-20 by using a lightmeter, for example, or by applying the Sunny 16 exposure rule. Manual exposure control also allows for creative use of over and underexposure, and for multiple exposures.

In the Preview's 'classic' aspect ratio, a single frame is approximately 4.5x smaller than the Six-20's 620 film. The latter is at an immediate advantage, then, for image quality. For example, a small 6x4in print from APS requires an 8.3x enlargement, while for 620 it is a 1.8x enlargement. APS film is more difficult to come by, and beware of out-of-date film. One film we used had a severe green cast, and to rescue images I converted to black & white (see left). Of the two comparison shots, the APS shot looks more 'dated'. However, the Six-20's images are soft too, which suits some subject matters like the castle image. All in all, I prefer the feel of images taken with the Six-20.

# Advanced level

Richard Sibley compares the Retinette 1B with the EasyShare Z710 – two cameras built for enthusiasts but released 40 years apart

KODAK 35mm films used to be a staple of the company's business, with brands such as Gold, Kodachrome, Ektar, Portra and T-Max readily available. And it was cameras such as the Kodak Retinette series that would have used many of these films

The Retinette was aimed at more advanced photographers who understood the basics of exposure, but wanted something smaller, lighter and more affordable than an SLR. It was the type of camera that many families took on their holidays, as well as being seen at camera clubs up and down the country.

The Retinette 1B has a fixed Rodenstock Reomar 45mm f/2.8 lens but with a 35mm viewfinder. Its shutter is a Pronto LK, which has a maximum shutter speed of 1/500sec. The basic specification is good, and as an everyday camera it is still as usable today as it was in 1959.

Although the fairly recent introduction of compact system cameras, and the current trend for compact cameras with

large sensors, has changed the tools of many enthusiast photographers, bridge cameras could be seen as the modernday equivalent of the Retinette. They bridge the gap between a compact camera and an SLR, but offer a full range of manual-exposure options that an enthusiast photographer demands.

Kodak's EasyShare Z710 bridge camera was released in 2006. It has advanced evaluative metering, a 7-million-pixel sensor, a 10x Schneider Kreuznach Variogon optical zoom lens and all the conveniences of a modern digital camera.

#### IN USE

Having spent some time using both Kodak cameras, I am clear about which one I prefer. For all the convenience of the EVF, LCD screen, in-camera ISO and zoom lens in the EasyShare Z710, there is something much more liberating about using the Retinette 1B.

Below left: Despite the differences in image ratio, the pictures produced by the Retinette and Z710 look remarkably similar With its solid metal body, the Retinette 1B feels like a far higher-quality product than the plastic and lightweight EasyShare Z710, and comparing the low-resolution screen and EVF with the bright optical viewfinder of the Retinette 1B, there isn't much contest, particularly in bright sunshine.

There are a few quirks with the Retinette 1B. Having the film advance lever on the underside of the camera rather than on the top right of the topplate is bizarre. It is clumsy to operate, and certainly slows the camera down, and you do wonder whether Kodak moved this lever just to try something different from its competitors.

What I got from the Retinette was a more tactile experience. Loading film rather than slotting in a memory card, plus thinking about framing and exposure rather than clicking and checking the image, are approaches that demand patience and thought. Don't get me wrong, I am all for digital cameras and the convenience they offer, but I would advise anyone learning the basics of photography today to at least start with film as it offers a more considered approach.

What is clear from using the Retinette is just how far we have come since the days when we all regularly used to shoot 35mm film. However, it is also clear how quickly digital technology goes out of date. Just six years since its release, the EasyShare Z710 looks very dated. Sensor resolutions of comparable cameras have doubled, as have screen resolutions, while optical zooms are now reaching 50x rather than the now humble 10x lens of the EasyShare Z710.

# Conclusion

**WHILE** I found that the EasyShare Z710 has aged relatively badly, there was no such feeling with the Retinette 1B. The experience of loading a roll of film, looking through the viewfinder, setting exposure settings and firing the shutter is the same now as it was 50 years ago. If you were to make a film camera today with a similar specification, you wouldn't change much at all. You may change the appearance slightly, but the principles and mechanisms are largely unchanged.

Early this year Kodak announced that it will no longer be making digital cameras, and even more recently that it was to sell off its film and paper division. However, perhaps there is still a future for Kodak film. Although prices have increased as demand has dropped, Harman's Ilford-licensed products have shown that there is still a good demand for quality film products, so hopefully we will still be using those much-loved Kodak 35mm films for a few more years yet.

Professional level

Damien Demolder compares a pair of Kodak bodies designed as everyday workhorses for the professional photographer

WHILE Kodak has almost always been a powerful force in the life of the professional photographer through its films, papers and chemistry, the company's more recent history has featured few memorable professionalgrade camera systems. The last, the 14-million-pixel DCS Pro 14n, arrived in 2002 at the same moment Canon announced its similarly full-framed EOS-1Ds - and kodak ladened it with more pixels and offered it at a lower price.

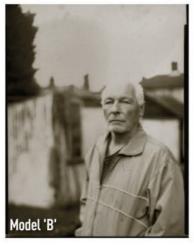

Kodak once proudly displayed it fitted to the back of a 5x4in monorail camera as the 'ideal' precision studio set-up. I've picked an equivalent model from the

It was designed as a workhorse, and

1920s to use alongside it - the Kodak View Camera. I'm using the whole-plate, model 'B', version that folds neatly to make a package that is about as portable as a full-sized plate camera can get.

The cameras have a lot in common: neither came with a Kodak lens: both use the largest recording medium in general use for the day; neither was especially expensive; and both use functional nonluxurious bodies. The Pro 14n is based on the decidedly non-professional Nikon D80, and has most of the features one would ever need, but without exceptional build or speedy AF. The View Camera model 'B' is made of wood and brass, and is very nicely put together. It lacks beauty, but makes

Neither camera is especially good looking, but these were the business tools of their day so function is far more important than style up for it with well thought-out rack-andpinion-controlled movements for both the viewing screen and lens panel.

#### IN USE

While technology has inevitably improved technical quality since the beginning of photo history, it is convenience that has really been the obvious beneficiary. AF, AE, built-in metering and the ability to shoot 100 pictures easily are the advantages of the modern camera. The View Camera model 'B' has none of these facilities. It is slow to use and I had to trim darkroom paper to 6 x 8in to fit the film holders. I processed the paper in the kitchen after dark, and I had no idea. whether the pictures had come out, or if my subject had blinked, until the giant paper negatives were fixed. However, I knew what this process would be like. expected it and everything went smoothly.

The Pro 14n should be the epitome of convenience in comparison, but I had trouble getting it to accept modern CF cards as it failed to save on a number of occasions. I had to intervene manually with the metering, focus manually as I was tripod mounted, and the menu system is far from intuitive even to me - and I've had the camera for almost nine years. It can't be denied that the technical quality of the images from the Pro 14n, fitted with a Nikkor 28-70mm f/2.8, are far superior to those produced by the Zeiss 16in f/6.3 lens on the model 'B', but the characteristic quality, the atmosphere, and the extremely shallow depth of field of f/8 on whole-plate via the Zeiss lens appeals to me a great deal more.

# Conclusion

THE KODAK View Camera model 'B', like most of the View Camera series, was the photography white Transit van of the day. It does its job, is reliable but is also pretty unremarkable, even with its nice gnarled adjusting knobs. The DCS Pro 14n is somewhat more flashy, and while it has comforts and many more automated features it is a pretty awkward beast and it is difficult to force it to do what you want. The technical quality is, undeniably, a good deal better than I achieved with darkroom paper in the View Camera, but were the model 'B' loaded with film, or a plate. I'm not sure it would compete so easily - unless colour was a requirement of course.

Kodak's progress in the 90 or so years that separate the two cameras is obvious, and all but the most masochistic professional would choose the plate camera over the digital model - but you also have to be pretty masochistic to really enjoy using the Pro 14n.

Which is the better of the two? Begrudgingly, I have to say the Pro 14n, but the View Camera is far more fun.

### **READERS REMEMBER**

We asked AP readers to share their experiences of Kodak products over the years via the AP website. This is a small selection of their memories of the famous brand

The school darkroom

I remember a trip to Kodak in Harrow in about 1969 or 1970, seeing the whole process of making paper and film, and visiting a couple of darkrooms. Not something that everybody got the chance to do and a thoroughly enjoyable day out for a 15-year-

At the time I was using a Kodak Instamatic camera and developing my own black & white film in the school darkroom. Until I got my first SLR in about 1974, I don't remember any other

make of camera or film. I even applied for a job at Kodak in 1971 and got to see another side of the factory. Unfortunately, I don't remember whether I was offered the job but I never did work for them. Geoff R

#### Blown away

Thanks to my interest in film being once again piqued by the Lomography movement, I acquired a selection of cameras all requiring me to get reacquainted with Kodak.

Maybe I'd forgotten how good it looked but I was absolutely blown away by T-Max 400 and Tri-X and couldn't help but feel like they looked so much better than my digital black & white pics.

I also had some fun playing with Ektachrome VS and Elite Chrome Extra Color and was sad when I read that production had stopped.

Ultimately I let go of film (again!) and, although for many reasons, it was in part upon learning of the demise of Kodak.

#### A diet of Kodak film

Like so many folks my first camera was a Kodak, a basic Instamatic that is still in a cupboard somewhere. Mostly it got fed a diet of Kodak 126 cartridges in colour and mono.

When I got an Olympus OM1n, it tended to get a mixture of Kodacolor II, Ektachrome and, when I was feeling adventurous, the odd roll of Kodachrome 25 or 64. Later on, when Kodachrome 200 came out, I used that too.

My grandfather had a Kodak Autographic, though I'm not sure which version, but it takes 127 film and that's also safely away in a

El Sid

A friendly gift

I was given a second-hand Brownie 127 by a best friend at primary school. Must have been in about 1963-4. I think that was about when a new model came out so it might be that he just got a new one. I was very impressed. It was a disproportionate gesture to be given something special like that.

My grandfather, who was a very keen photographer (and, I believe, an AP contributor), helped me with the developing but he lived a long way away (in Aberdovey, while we lived in Watford) so as a photographic start it had to fit with holidays to Wales. I think we may even have a print from that camera somewhere in the family album.

The big debate

I remember the time when, following the periodical 'troubles' that would arise with Kodachrome, there was a bit of a debate among photographers as to which Kodachrome lab gave the best results, due to 'different' handling, water used, and so on. Some claimed that the French or Swiss labs were far superior to Hemel Hempstead, and started to post their films abroad. Some of these were then puzzled to get their films back from Hertfordshire.

There were rumours that, as packages of that size were not machine sorted by the Post Office, irrespective of the value of the stamp and the address that was applied to the yellow, white and red envelope, the Post Office sorter merely saw the familiar envelope and sent them all in the same Olybacker sack to Box 14.

My first Kodak

My first 35mm camera was a Kodak. Before that I'd had a little fold-up 110 camera, and even at the age of 13 I recognised that Kodak was a proper camera brand (mainly down to that red K being all over anywhere that sold cameras or film). It was very much a camera for cool boys, all smooth, shiny black plastic and an aggressive 'S100' in bright red script.

Despite wanting all the modern bells and whistles, my dad's avoidance of autofocus, autowind and suchlike as 'there's less to go wrong' heeded well, as it still works 23 years later despite taking a few knocks.

Surf digby

Many thanks to Metro Imaging (www.metroimaging.co.uk) for developing and scanning the films used in this feature, and also to London Camera Exchange, Bath branch (www.lcegroup.co.uk), for loaning us the Kodak EasyShare Z710

#### **KODAK THROUGH** THE YEARS

George Eastman begins production of dry photographic plates

First Kodak pre-loaded box camera (100 exposures) patented in USA along with the flexible film that it used. The name 'Kodak' is born

Kodak's first UK factory completed at Harrow, Middlesex

The company becomes Eastman Kodak Company of New York

The first Brownie camera is introduced in the USA. Selling for \$1 and using film that costs 15 cents a roll, it brought hobby photography within financial

Kodak introduces 120 film for use in the Brownie

Vest Pocket Kodak introduced and with it the new 127 film to fit

Kodak Retina folding 35mm camera introduced, together with first ready-loaded 35mm cassettes

Kodachrome film is introduced and becomes the first commercially successful amateur colour film

Kodak Ektra 35mm coupled-rangefinder camera and lenses introduced in the United States to rival Leica and Contax systems

Kodak Retina Reflex 35mm SLR cameras first produced. The series continues until 1967

Kodak introduces a line of easy-to-use Instamatic cameras with 126 cartridge-loading film (selling more than 50 million by 1970)

Kodak 110 film and 110 pocket cameras introduced

Kodak invents the world's first digital camera. The toaster-size prototype captures black & white images at a resolution of 0.01 megapixels

Kodak stops selling film cameras in the face of increasingly popular digital alternatives

#### Dec 2010

Kodak ends processing of Kodachrome colour film

# Christmas projects

If all the festivities prove too much, we have five photographic projects that you can try out this Christmas

IT MIGHT get dark outside very early at this time of year, but this is the perfect time to head out and practise your light-painting skills. Find a very dark night-time scene and set a long exposure on your camera. Then, by using a flashgun, torch or even a glow stick, you can move around the scene using the light to illuminate and reveal parts of it.

#### **DOWN BY THE RIVER**

For this image I chose to light a small wooden bridge over a river, hoping that a reflection in the foreground would add another point of interest. The scene is located in woodland, with no artificial light for some distance, although there is an amber glow visible from streetlights a few miles away

The first step is to set up your camera. It goes without saying that a tripod is needed, along with a torch to be able to see what you are doing. Set up the camera to save images as raw files, as you will want to deal with noise reduction carefully once you have captured your image.

For this scene, an exposure of 30secs is ideal. It gives enough time to illuminate the scene with a torch without any ambient light affecting the scene. One issue when composing an image like this is focusing. For this, I decided to shine a torch on the point

of focus, which usually lights it up enough to allow the camera's AF to work. Once locked on, I could fix it in place by switching the camera and lens to manual focus.

Exposing the scene is really a matter of experimentation. I found that an exposure of 30secs at f/8 with an ISO of 400 was ideal. With the shutter fired, I then moved around the scene, just out of shot, keeping a torch continuously moving over the parts of the scene that I wished to illuminate. A quick glimpse at the image on the rear of the camera soon reveals whether or not it has been successful, and highlights any areas that haven't had enough exposure.

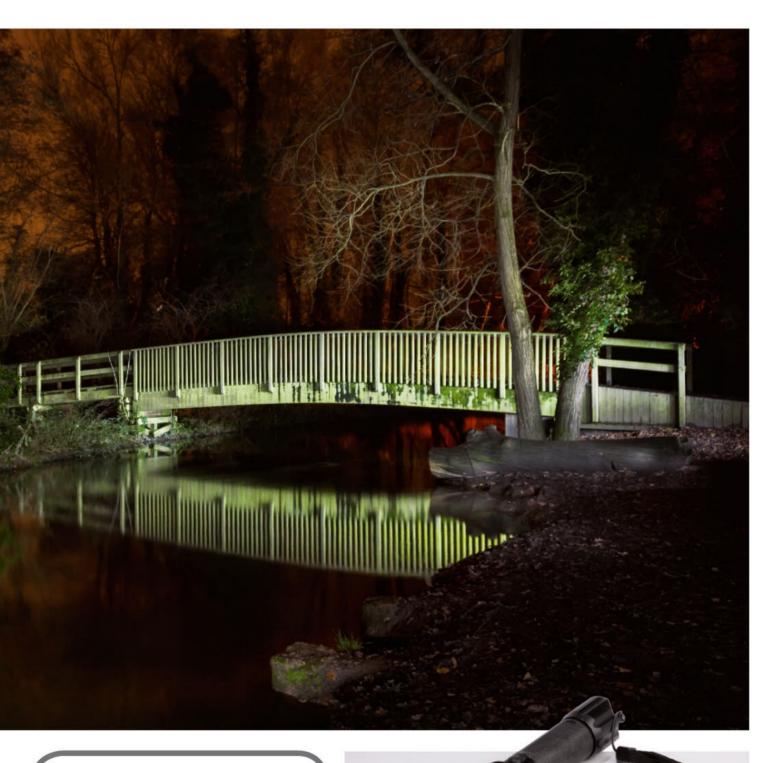

In this image I had the exposure on the bridge looking good, with a nice reflection, but there was a lot of dead space on the left-hand side of the scene. Luckily, I had a second torch, and another pair of hands, to help me light this side of the scene, but only using the torch for 20secs of the 30secs exposure. This meant that the left side was clearly visible, but without being the dominant focus

Finally, I sharpened the raw image in Adobe Camera Raw, and applied some slight noise reduction. I also adjusted the white balance to remove some of the blue tint created by the cool light of the LED torch

- A second pair of hands is extremely useful, especially in the dark, so bring a friend
- Make sure your tripod is sturdy, and the head is tight. Any creep over 30secs will severely blur the image
- Wear black to ensure that you don't appear in the image as you move around the scene
- Make sure that the torch is faces away from the camera lens otherwise it will appear in shot or cause lens flare

Any torch will help you when taking painting-with-light images, but the more powerful, focused beams will help pinpoint areas to light. In this example, I used a high-powered SpotON 505 hand torch. See www. spotonlights.com for more details or look out for our review in a forthcoming Testbench.

#### Use colour to grab the viewer's attention in a multi-image, single-colour collage

**INTENTIONALLY** going out with a camera to capture a specific colour is a great way to develop your creative eye. There are the obvious subjects, such as a yellow banana or a red post box, but it's more of a challenge to find a scene or a subject where a certain colour grabs the attention. Of course, if you shoot in colour you will probably already have all the images you need in your collection for this challenge, so you may not need to take any new pictures at all. However, the process of shooting with creative intent for a single colour will benefit the end result.

Open your organiser software and create a new folder, naming it 'red', 'green' and so on, then transfer the appropriate images to it This can be a long-term project, adding images to the folders as and when they are ready. It is worth creating several colour folders, as you are likely to find your image collection has interesting subjects covering a number of colours. When looking through your image folders, watch out for subjects that are synonymous with a colour, such as a red chilli. Do not discount images where the intended colour takes up only a small amount of the frame, such as a red traffic light in a street scene, because once the collection is complete, the Crop tool can be used to single out the desired subject. Here, I have placed 20 images together in the final collage, but try experimenting with different numbers of pictures.

#### **SOMETHING A BIT DIFFERENT...**

Add an abstract twist by changing the hue of an image that does not include the right colour, or by changing the colour of a familiar subject - a purple banana, for example.

'Intentionally going out with a camera to capture a specific colour is a great way to develop your creative eye'

# A multiple-exposure image can transform an otherwise dull everyday scene into a work of art

**NOT ALL** image manipulation requires editing software. A multiple exposure can be achieved in-camera, and it is a technique that has been creatively explored by film photographers long before digital imaging. Now, many digital camera systems offer a multiple-exposure mode – in many cases up to nine exposures in one frame – and an autogain control. In autoexposure mode, autogain adjusts the exposure settings for each frame to set an appropriate overall exposure. For example, each frame in a five-frame multiple exposure is set to one-fifth of the total strength.

Alternatively, each exposure can be set manually without autogain for greater control, to over or underexpose a scene or set individual exposures in a sequence. A night scene, dimly lit by street lights, is often more effective when overexposed. The 'correct' exposure can be calculated from the measured exposure. For example, 1/500sec at f/8 becomes 1/125sec at f/8 in a four-frame multiple exposure.

For a graphic effect like the one above, try an urban setting with repeating patterns, such as overhead lines, lamp posts and terraced buildings. Subjects on the move, such as people and motor vehicles, also work well, as they change position between each frame. Once the first exposure has been captured, shift the camera slightly and record the next. Experiment with the number of exposures you take, and the amount you shift the camera. Remember, though, that when using autogain, the more frames added, the less clear the subject becomes when shifting the camera, as each exposure is reduced.

WHAT'S NEEDED...
Camera with multiple-exposure mode.

# Cloak an image in mystery by shooting entirely out of focus

WITH technical excellence being the aim of most camera technology, the idea is to produce sharp images that reveal plenty of fine detail. However, as great as this may be, why not try intentionally 'hiding' detail by shooting out of focus? The clever use of colour, light and the bokeh effect is important for capturing an effective out-of-focus image, but shapes are the key point of interest. Start by shooting familiar subjects and landmarks, but as your experience grows turn your attention to more abstract ideas. People are great subjects for out-of-focus images, because a sense of mystery can be introduced into what would otherwise be an ordinary scene. Artificial lights, such as those found in a high street at night, also work well.

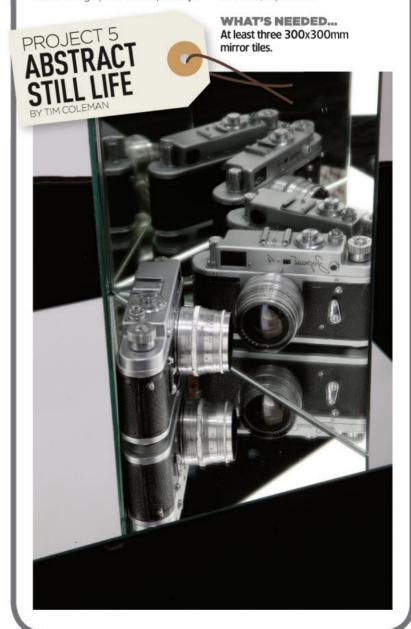

WHAT'S NEEDED...
Camera/lens with manual focus control.

# Give a still-life image an abstract touch by using mirrors to create multiple reflections

**COMPOSITION** and lighting are key considerations for a successful still-life image, but mirrors can add a fresh twist to a subject. A pack of four 300x300mm mirror tiles can be bought from most hardware stores for £10-£15, and are big enough for many still-life subjects, be it a flower or an old camera (see below). Smaller objects often work best, especially when the size of the reflections are factored in

It's worth wearing gloves when removing the tiles from the packaging, and make sure the tiles are clean before shooting because dust and fingerprints show up clearly. Watch out for unwanted details being reflected in the mirrors, too, and always check over the images post-capture. Angling the side mirrors towards each other provides the multi-reflection effect.

Using a single colour base to rest the subject on helps to keep the composition uncluttered, although using a mirror as a base can work, too. To illuminate the subject, a single continuous light source from above works best, while the angle of the camera and height above the subject can have a lot of bearing on how effective the final image is. Above all, experiment!

# **ASKAP**

Let the AP team answer your photographic queries

I am thinking of using Minolta MC lenses on a digital interchangeablelens camera, but could you tell me what makes of digital camera I could use them on without losing infinity focus? I do not want to use the adapters with the built-in 'correcting lens' as that will ruin the quality of the images. I have heard that Sony and Olympus four thirds cameras are possible options, but are there others? Charlie Sears

I think the first thing is to ask yourself how badly you want to use your Minolta MC lenses. It's not that your Minolta MC lenses can't take great shots, or that they're 'bad' lenses, but they were never designed with digital capture in mind so there will be compromises.

The first of these – and perhaps the most significant - is the camera. As you don't want to use an adapter with a correcting lens, this excludes Canon, Nikon and Sony DSLRs, and although Olympus four thirds is an option, you really are limiting vourself to the cameras you can use. However, according to Fotodiox (www. fotodioxpro.com), which manufactures numerous adapters, you could attach your lenses to a Nikon 1, Samsung NX or Sony NEX camera body without losing infinity focus or adding an additional glass element.

Yet just because you can doesn't necessarily mean you should. Speaking from experience, I've been using OM

lenses on an E-system camera for several years now, and it's something of a love/hate relationship - chromatic aberrations and fringing that I never experienced on film are all too obvious with certain lenses at certain apertures when they're used on a digital camera body, and the stop-down exposure metering can be somewhat unpredictable at times.

When everything comes together they can produce beautifully sharp images, but it's not always easy getting there, so all I would ask is whether you want or need to add this inherent incompatibility to your photography. By all means consider a camera that will accommodate your Minolta lenses, but I would be loathe to suggest that this should be a primary motivation in your purchase. As you're looking to invest in a new camera, now is the perfect opportunity to upgrade your old kit, rather than make compromises from the word ao.

#### **PIXEL POSER**

A full-frame sensor with a resolution to prevent my D200's DX lenses from becoming redundant makes the Nikon D800/800E appealing after years of salivating over the thought of an unaffordable D3X. However, the use of a tripod is recommended because of all those extra pixels, and you have to have the best-quality glass. I don't recall requiring better optics for an ISO 50 film over an ISO 400 or ISO 3200 one, which would seem to be the parallel film situation. Can you explain? Norman King

I have been following the discussion about the difficulties of using the latest Nikon cameras with huge megapixel resolution. I recently sold my Nikon DX-format cameras and bought a Nikon D800E. This is a wonderful camera and I have had no problem with moiré.

However, I have read that tripods must be used, along with the best lenses and fast shutter speeds, but I don't see this as a change that is due to the new large resolution: careful technique has always been desirable for the best results, even with film. I understand that newer lenses are better with digital sensors because of the need for telecentricity, but why would having a large-resolution sensor make a camera more fussy? How will DSLR photographers fare if the rumoured new 50-million-pixel Canon model appears? John Strain

To make the most of a highresolution camera, you need topquality lenses, which is true of any camera. Both camera and lens resolution make a contribution, so put a good lens on a camera and it will perform better than with a poor one, and a poor lens will perform

### FROM THE **AP FORUM**

#### Photo usage advice

Alkabir34 asks I took some property shots for free for a client (call them Company A) as a favour. It was a marketing event they were running, but the actual property belonged to a different company (Company B) to whom I was introduced. I sent low-resolution copies of the property shots (without watermark) to Company B as examples of my work and to ask if they would like to use my services. I didn't receive a response, but a few months later found my images on the company's Facebook page without mentioning it to me or mentioning my name on the album.

# AP GLOSSARY

Demosaicing is the rather elaborate word used to describe the way in which colour is created from the data recorded by a digital camera's sensor. To get to grips with demosaicing, you first need to have a passing understanding of Bayer pattern filters. On most digital sensors, each light-sensitive photosite is fronted by either a red, green or blue filter, with two green-filtered photosites to every one red and one blue. This means that each photosite records a single shade of its filtered colour: a greenfiltered photosite only records a shade of green, depending on the amount of light it receives.

However, while this single photosite can only record a shade of green, adjacent photosites are recording distinct shades of red and blue (not to mention additional green), which is where demosaicing comes in. By looking at the values of the surrounding red, green and blue photosites in terms of their filtered colour intensity, and then employing some complex algorithms, the camera can effectively 'guess' what the actual colour should be, and use this to create an individual pixel. If the greens are 'strong', the blues 'average' and the reds 'weak', for example, then it's likely that the resulting pixel is going to be a shade of green - grass in a landscape, perhaps.

This demosaicing process is repeated for every single pixel in the image (in a split-second), resulting in a full-colour digital photograph from three primary

better on a 36-million-pixel camera than it will on a 12-million-pixel one. If you have camera shake or don't focus properly, that will limit your resolution gain, but this is true of any camera. When using high-resolution cameras, I have found that a simple halfresolution development - that is, combining the four pixels in a Bayer quad to one, rather than demosaicing (see above) - from a D800 produces a nice 9-million-pixel output file, and is very fast. Half-resolution development refers to the option of simply combining a red, green, blue, green (RGBG)

set of four pixels in the Bayer array into a single full-colour pixel in the output image, rather than using interpolation. It leads to an image with half the linear resolution and one quarter of the pixel count. It is very fast and gives a particular quality to the output file. It's available in most raw-processing tools that allow the user to select the demosaicing method, such as RPP (www.raw-photoprocessor.com) or Raw Therapee (rawtherapee.com). When you don't need 36 million pixels at your disposal, it's a good option. Bob Newman

Is the company able to do this legally without my permission? Is it the same as if they used the images on their corporate website? If they are allowed to do it, am I overreacting by being rather miffed that they didn't even tell me?

LargeFormat replies Assuming you didn't sign away your copyright, they shouldn't use your pictures. Ask them to take them down or give you a credit or whatever you want.

RogerMac replies Just a suggestion for the future, as well as watermarking the final images, check your camera's facilities. Many allow you to insert a copyright statement complete with name and address into the Exif data of all images. Just be sure never to distribute an image without the Exif.

NosamLuap replies Legally, you hold the copyright, but I assume that whoever runs the Facebook page for a property company isn't a copyright lawyer, and they probably figured that you emailing them in made them 'fair game'

I'd send them something along the lines of, I'm glad to see you like my images and you're using them on your Facebook page, but please realise that my commercial model can't support simply giving images away. If you wish to continue to use them for free, please use the attached watermarked versions - this way, you get free imagery, and I get some potential paid work and visibility. I'm happy to discuss a licensing fee if you would rather use the existing non-watermarked versions, but note that those I sent you were low-resolution proofs of your building taken as part of a wider event. I'd be more than happy to discuss producing some more shots of your building and providing highresolution versions with a suitable licence.

If the venue is likely to lead to further work, such as a wedding venue leading to weddingphotography bookings, then I'd be even more salesy and offer to provide some full-resolution watermarked images of the location to their specification, including shots you may not have already given, and agree that they can use them on any website/literature as long as the watermark/credit remains.

# One of three Nikon 1 J2s!

To enter our competition, upload images of your interpretation of the festive season and you could win a Nikon 1J2 camera

**PERFECT** for capturing all those festive moments as they happen, the Nikon 1 J2 is speedy enough, clever enough and creative enough to capture the fun in your world without missing a beat.

Designed to act fast, the intelligent Nikon 1 J2 interchangeable-lens camera ensures you stay a click ahead of the action. Ultra-portable and

simple to operate, it has all you need to capture great photos and movies.

The bright LCD screen offers crystal-clear shooting and playback, and functions like the innovative Motion Snapshot and the easy-to-use Creative Mode allow you plenty of creative ways to record your life. For more information about the Nikon 1 range, visit www.nikon.co.uk.

For your chance to win one of these fantastic cameras, visit www.amateurphotographer.co.uk/competitions and upload up to five pictures of your interpretation of the festive season. It might be a winter landscape, a gorgeous sunrise on New Year's Day, a crowd of shoppers or a portrait of a person – it's your choice. Just send us images of what the season means to you.

Make sure you upload your photos to our Amateur Photographer gallery by 13 January 2013 for your chance to win one of three Nikon 1 J2 cameras. To enter, visit www.amateurphotographer.co.uk/competitions

For full details, including terms and conditions, visit the AP website at www.amateurphotographer.co.uk/competitions

# Future proof

The past few years have seen rapid technological innovation and a burgeoning of products. At AP we're proud to have foreseen many of these developments, so, with photographers looking forward to the future with eager anticipation, **Richard Sibley** looks at what may be next

> WE SEEM to say the same thing every year, but the past 12 months have been truly fantastic for photographic innovations. Features that previously skirted around the edge of the consumer camera industry found their way into exciting new products. Wi-Fi connectivity has been this year's must-have feature, and in the Canon EOS 6D we have the first Wi-Fi-enabled DSLR. Almost all the major manufacturers now offer some form of wireless connectivity in their new cameras, which is something we have been predicting at AP for a few years.

Back in 2010, I wrote, 'Imagine a DSLR or compact system camera with the option to connect it to the internet and download new functions... In effect, the user could customise the features of their camera, and continue to add to them'. With the new Nikon Coolpix S800c and Samsung Galaxy cameras using the Android operating system, this is now a reality. Rather than these cameras having a closed proprietary operating system

(OS), they use Google Android OS so there are thousands of applications that can be downloaded. The majority of these apps aren't for photography, but they do offer us the opportunity to change the way we use our cameras. Camera phones mean there is an entire generation of people who share their images instantly online. Virtual online albums have replaced physical ones, and people now document their lives more than ever before. This has led to a new breed of documentary photographer and is bound to influence the way manufacturers build their cameras in 2013 and beyond.

### THE MARKET

When the global financial crisis was at its deepest and sales of new cameras were starting to plateau, compact system cameras (CSCs) appeared on the scene. They really invigorated the market, appealing to a huge number of new photographers who didn't want a large DSLR. The CSC market continues to

entering the arena, but one product that isn't doing so well is the traditional compact camera. Sales have suffered as young people now use their mobile phone cameras for snapshots, carrying up to 41 million pixels (Nokia 808 PureView) in their pockets. While this isn't good for entrylevel compacts, it has proved a blessing for enthusiast photographers. Manufacturers have shifted their attention to the top end of their compact camera ranges. Every major manufacturer now has an advanced compact camera, with models such as the Fujifilm X10 and XF1 offering slightly larger sensors than conventional compact cameras. Then there are those with very large sensors, such as the Sony Cyber-shot DSC-RX100 and its 1in sensor, as well as the Canon PowerShot G1 X with an almost APS-C-sized unit and the Fujifilm FinePix X100, which comes equipped with a 12-million-pixel APS-C-sized sensor. However, this year it was the Sony Cybershot DSC-RX1 that stole the show - a fixed-lens compact camera with a fullframe 24.3-million-pixel sensor.

With so many excellent cameras available, it can be a difficult to make a choice. I'd imagine that the next 12 months will see the second generation of many of these cameras adding more new features, and possibly higher resolutions.

As for the industry, it seems to be on the rise again, spurred on by this year's new products. In the lead-up to Christmas, almost every other peak-time TV advert seems to be for a camera, and hopefully this should be reflected in some excellent sales figures compared to last Christmas.

'The coming years will also see 3G/4G mobile data connectivity in DSLRs, probably in the form of an accessory unit initially'

### CONNECTIVITY

Not only is Wi-Fi connectivity in-camera set to continue, but with the Samsung Galaxy Camera we now have 3G/4G mobile-phone data connectivity in a camera. I would expect other compact camera manufacturers to introduce similar products, with the most likely companies being those that already make mobile phones, such as Panasonic and Sony.

The coming years will also see 3G/4G mobile data connectivity in DSLRs, probably in the form of an accessory unit initially. This would allow professional photographers to send images anywhere in the world straight from the camera, and would prove most useful for photojournalists feeding the demand for 24-hour news. Looking further ahead, I'm sure it won't be too long before we are popping SIM cards into our DSLR or compact system cameras alongside memory cards.

### **BATTERIES AND POWER**

Generally, new features require more power. Even increasing the resolution of a sensor means that more power will be consumed, and with HD video capture now a standard feature the drain on battery life is greater than ever before

Although battery technology has improved in terms of the power generated compared to the size of the battery, another huge leap forward will be needed to keep up with the demand in the next few years. At the moment, the solution for most of us is to carry around a spare battery when out shooting, or if we are away for a few days to take a charger. Thankfully, most compact cameras can now be charged via a micro USB socket, which makes it simple to charge **FLASH** 

ANOTHER area where connectivity may change is when using flashguns. Wireless connectivity already exists. with either infrared, pre-flashes or radio triggers used to communicate and trigger flashguns. However, if flashguns were to have built-in Wi-Fi, it may be possible to adjust all the wireless flash settings via a mobile phone app, and then use a more conventional method of triggering. The advantage of using an app over existing technology would be the larger screen on a tablet or computer, plus the ability to have a virtual preview of how a subject would look as the different lighting ratios change.

Wi-Fi-controlled flashguns could be controlled via a phone app

a camera battery using the same charger as a mobile phone. The advantage of this is that it increases the number of places that the battery can be charged, and it means that a single charger can be used across a number of devices.

What would be even more useful is the ability to charge a DSLR battery via USB. The obvious downside would be the slow speed at which it charges, but it would be incredibly convenient. You could trickle

The wireless charging pad of the Nokia Lumia 920 may be something we see soon on a compact camera

Lexar Professiona CompactFlash® UDMA 7

charge your battery and keep it topped up while driving in your car between locations, or use an external USB battery pack to charge it in while carrying your DSLR in your bag.

> Another recent development is Nokia's new Lumia 920 mobile phone, which, as well as Micro USB charging, has an

optional wireless charging plate. Such plates have been around for a while, but it is interesting to see this technology built into a product. To charge the phone, you simply place it onto the wireless charger, and electromagnetic forces in the charging

plate and phone transfer energy via inductive coupling.

The Wireless Power Consortium is a collection of more than 100 electronics manufacturers that have agreed to produce products to an inductive charging standard, known as Oi. Nokia is one of these companies, along with Sony, Samsung and Panasonic. Potentially, this means that a single wireless charging pad that could charge any number of small compatible electronic devices, in much the same way as a wired Micro USB charger works across various products.

Wireless charging is something we may see guite soon on a compact camera, but it does have its downsides. Generally, the battery isn't replaceable, so it wouldn't be possible to carry a spare. Also, the wireless charging plate has to be plugged into a wall, so while it is very interesting and clever technology, its usefulness is limited.

### **AUTOFOCUS**

Two years ago I wrote about the hybrid phase/contrast-detection AF sensor found on the Fujifilm FinePix F300 and predicted

Levar is set to

release its range of

XOD cards in 2013

uses an on-sensor phase detection in its 1-series compact system cameras, but the most interesting use of such a system is on the Sony Alpha 99 single lens translucent camera.

On-sensor phase detection is a great way of being able to focus a camera's lens while shooting video. It is much less fidgety than contrast-detection AF, so video can be focused smoothly. It will also allow for faster focusing of moving subjects. Despite contrast detection becoming ever faster, I think these hybrid sensors will see the most growth, with Sony potentially introducing them across its Alpha and NEX range of cameras.

### MEMORY CARDS

I don't really need a crystal ball to predict that memory cards will increase in both capacity and speed. SD cards with speeds of

### 'On-sensor phase detection is a great way of being able to focus a camera's lens while shooting video'

150MB/s can't be too far away, and higher resolutions and video capture will also push capacities further. What is more interesting is the new formats of memory cards.

This year saw the launch of two new cards, the XQD and the CFast 2.0. Nikon's D4 is the first camera to use the XQD card format, which offers faster transfer rates than a CompactFlash card, with potentially even faster transfer rates and huge capacities available in the future. Currently, Sony is the only manufacturer to produce XQD cards, although Lexar will soon start manufacturing them. What is odd is that so far only the D4 uses the card, despite both Sony and Nikon releasing professional cameras after the launch of the D4.

The rival CFast 2.0 card isn't available yet, but it promises similar speeds to the XQD in slighter smaller package. Canon is supporting the CFast 2.0 format, and it is possible that we could see a new Canon

DSLR using this card next year. If so, it is reasonable to assume it will be dual-format card, most likely CFast and SD, as the two are similar in size.

The problem with both of these new formats is that the SD and CompactFlash card formats have been around for a few years and are well established. Most photographers will have a small collection of cards, and investing in a new card format can be reasonably expensive. A top-of-the range 32GB SD card costs around £70, and a CompactFlash card around £180, while an equivalent XQD card costs around £230, so trying to convince anyone other

than professional photographers that these new cards are needed may be a tough job, especially when there still seems to be room for improvement in the SD and CompactFlash specification.

The recent USB 3.0 sockets and Apple's Thunderbolt connections are becoming fairly common on most new computers. We have seen USB 3.0 in the Nikon D800, but expect to see it in most professional cameras next year. These connections, combined with the latest memory cards, will mean that photographers have faster transfer speeds between computer and existing memory card than ever before. AP

## **OPERATING SYSTEMS**

**NOW THAT** both Nikon and Samsung have Android operating systems on their cameras, we can expect to see even more of these products next year. Android is the obvious choice for an operating system as it has a huge number of existing applications that can be downloaded. With Sony already producing mobile phones that use Android, it may be the next manufacturer to introduce this.

I wouldn't expect to see Android on a DSLR in the coming year, as it is a feature that is aimed more at mainstream consumers. However, there is every possibility that it could appear on a compact system camera. Samsung would be the logical company to do this, as it already has good Wi-Fi connectivity in its NX cameras and the Android operating system in the Galaxy Camera.

As more cameras use operating systems such as Android, we may see, manufacturers bringing out their own Android apps. However, as Android is an open operating system, you could potentially have a brand A app on a brand B camera.

# Star student

# Clement Allen Enrolled on Diploma in Digital Photography Age 16 Occupation Student Equipment Sony Alpha 200 with 18-70mm and 70-300mm lenses

When did you first become interested in photography?

I first became interested in photography when my dad showed me his old Olympus SLR camera and I started experimenting with it. After a couple of years, I bought a Sony DSLR along with several lenses, which I have used ever since.

What do you enjoy most about photography?

I really enjoy being out and about with my camera and capturing moments that appeal to me. I am particularly keen on wildlife and aviation photography.

What are you hoping to achieve with your photography?

I enjoy sharing my photos with others and am often inspired

by the work of other photographers. I don't have any long-term plans other than to continue developing my photography further.

Where is the most enjoyable location to take photographs?

My favourite subject to photograph is birds, so my most enjoyable location to take photographs is our local nature reserve, the Watercress Wildlife Association in St Albans, Hertfordshire.

Why did you decide to enrol on the SPI course and how have you enjoyed it so far?

I have always been home educated and as my interest in photography grew I wanted to take it further, so I looked at various home-study photography courses.

In 2010, I enrolled on the SPI Diploma in Digital Photography course as it seemed the most appealing and interesting. I enjoyed working through each of the ten modules and learned a lot of new skills. The course really encouraged me to take images that I wouldn't previously have considered. My tutor gave invaluable and detailed feedback.

WE SAY Clement always presents his images very nicely and they work well as a set. There has been a definite and steady improvement in his abilities over the duration of the course. Well done on doing so well, Clement! You have clearly taken on board your tutor's comments and advice, and acted on these. We wish you all the best in your future photography work.

# Why collectors collect

Photographers collect cameras and kit for many reasons. Ivor Matanle looks at some of the most popular collecting groups – and has a solution if you're having trouble finding a gift for the collector in your life

**CAMERA** collectors are a funny lot. They come in all ages and have a variety of special interests. However, the two things that are common to them all are that they are always looking for something, but not always the same thing that they were looking for last week, and that their family will not understand exactly what they are looking for or why they want it.

So it is seriously not a good idea to buy a nice old camera for a collector at Christmas - unless he or she chose it and identified it positively as something they want. Even if the collector has a lot of folding cameras with bellows, the folding camera in the charity shop might not make a welcome present. Some folding cameras are regarded as collectable, but many more are not. And even if it is collectable, condition is important. If you are not expert, you may not be able to tell whether the camera works properly or whether it is complete.

Collectors are constantly seeking the approval, and ideally envy, of other collectors. This means that what collectors want most of all is what other collectors want and cannot find.

'You got a Bessa II with a Heliar for how much?' is the sort of question that makes many collectors feel really good. Yet the significance is unlikely to be understood by their family, or by friends who are not camera collectors. Which is why camera collectors tend to gather in groups and to have friends who are also camera collectors.

### **ONE-UPMANSHIP**

Just as schoolchildren used to compete to have the largest conker in the playground, and now judge the status of their rivals by what their mobile phone will or will not do. camera collectors compete to be seen as one step ahead. A collector I used to see at camera fairs said that he had more than 1,000 Rolleiflexes. I asked him once if he ever took a photograph. He looked vaguely pained. 'I haven't got time,' he said.

I pointed out that it is simply not possible to have 1,000 Rolleiflexes without there being guite a few duplicates. 'But their serial numbers are all different,' he said with an air of triumph. Just having more Rolleiflexes than anybody else made

Above left: An early Vest Pocket Kodak with square bellows, c1912. These were the 'soldiers' cameras' of the First World War

Above centre: An 8-on-120 folding Zeiss Ikon Nettar of c1954 with 105mm f/4.5 Novar lens and Prontor SV shutter. Post-war models are much more collectable than the 12-on-120 versions

Above right: A Rolleiflex MXVS with f/3.5 Tessar from 1956, a classic twin-lens reflex that remains totally usable with readily available 120 film

him content - almost

Another collector who is also a friend (and to whom I apologise if he recognises himself from this description) once told me that he would sometimes buy a rare camera just to prevent somebody else from adding it to his or her collection.

### THE ACADEMIC APPROACH

There is a large body of collectors whose motives for collecting are entirely laudable. These are the researchers. They set out to discover and explain the detailed history of a particular camera manufacturer or of a particular camera model. Some, who are often academics in their working life, tackle this task with full academic rigour and produce learned papers for publications devoted to photographic, industrial or social history. Such an example is Photographica World, the journal of the Photographic Collectors' Club of Great Britain. The results of their research, and of past researchers' toil, form much of the knowledge upon which all camera collecting relies.

Some collectors become irritated by researchers who constantly

ask for the serial numbers of the cameras and lenses that others acquire. Yet serial-number databases are vital to understanding how many of each model of a given type of camera or lens were made, and therefore of estimating or proving rarity. All collecting, whether of old masters, Copenhagen porcelain or matchbox labels, uses rarity as one of the bases for assessing value. Crossreferencing of, for example, camera serial numbers with the numbers of the lenses fitted to the cameras often makes it possible to define roughly when a camera was made. This is because there have for decades been databases of factory-sourced information about the dates of manufacture, by serial numbers, of widely used lenses such as the Carl Zeiss Tessar and the Schneider Xenar. Similarly, information about an example of

a camera that was usually sold with a Tessar lens, but has a Schneider Xenar, can lead a researcher to wonder why. He or she can then research - usually with serial-number data playing a major role - how many Xenar-equipped examples were made and when, so that other evidence explaining why that occurred can be sought. Typical reasons for non-standard lenses range from simple price competition - for example, if the manufacturer could in a given year buy 12 75mm f/3.5 Xenars for the price of ten equivalent Tessars - to strikes, political unrest or war.

### THE LESS ACADEMIC

Others of a less academic persuasion write books based on their experience of collecting, dealing in cameras or just being a photographer who likes the feel of classic

Above left: The Pentax SV of 1962, with 50mm f/1.8 Super Takumar, one of the great 35mm SLRs of the 1960s and still a fine camera to use

Nikon

Above right: A Nikon F Photomic FTn of about 1969 fitted with the superb 50mm f/1.4 Nikkor lens. It is heavy, but undoubtedly iconic

Right: A just pre-war Kodak Retina I folding 35mm camera with 50mm f/3.5 Schneider Xenar lens and Compur Rapid shutter. Retinas are popular with collectors

Left: The American Speed Graphic 5x4in press camera with 135mm f/4.7 Graflex Optar lens. Weegee used one of these with a flashgun for night street photography in New York

cameras and equipment. I fit into that bracket myself. I once amassed a large collection of Zeiss Ikon Contax coupled rangefinder cameras and their Carl Zeiss lenses in the 1970s, then subsequently wrote with my friend Dr Neill Wright The Contax Collectors' Checklist to impart what we had learned. However, I had by that time already amassed decades of experience of simply buying, using and selling interesting cameras, which I still do. There is nothing like the experience of having owned and used a type of camera to create understanding of why that particular camera is special - or not.

### 'Countless people over the years have told me that my books were to blame for them spending far too much on cameras'

One of the most common reasons for collecting cameras is simple nostalgia. People remember their father, grandmother or favourite uncle being proud of a Nikon, Leica, Pentax or Super Ikonta, and producing with it pictures that they admired. They feel a desire to own a camera like it.

When dealing extensively in classic Leica equipment during the 1970s, I was constantly looking, on behalf of a customer, for a particular Leica III that his father had owned. I had the serial number on the wall by my phone in case somebody offered it to me. I never located it and was never told whether he did.

An altogether different kind of nostalgia motivates collecting among many art or photography students, who frequently want to imitate the work of great photographers using the sort of equipment they had used. Friends who buy and sell equipment at camera fairs around Britain have told me of students asking them for a Leica of the 1930s as Henri Cartier-Bresson would have used, or for a Speed Graphic like that with which Weegee once prowled the night-time streets of New York City. A rather sadder request was for a Nikon S2 rangefinder camera like that in use by Robert Capa when he was killed in French Indo-China in 1954.

There has been a significant boom in large-format photography by students. In my former role as honorary secretary of the MPP Users' Club (www.mppusers. com), I answered many queries about acquiring or using an MPP 5x4in Micro-Technical, an MPP monorail camera, or about Linhof equipment. Large-format photography is straightforward when you have learned it in the course of your work, but there are many issues that arise when somebody tries to learn the craft in isolation. Thousands of photographers know the craft now, but the majority of them are retired and getting old. Over the next 30 years or so, the skills of large-format photography are in danger of becoming as threatened as the ability to build dry-stone walls, and, unlike stone, large-format film is not a natural resource.

### **CLASSIC CAMERAS CAN SAVE LIVES**

People often start collecting because of nostalgia, and continue because they love the feel and variety of fine cameras. Countless people over the years have told me that my books were to blame for them spending far too much on cameras, but few such comments approach the impact on me of the retired South African gentleman who approached me at a Cambridge camera fair in the 1990s and said simply, 'Your book saved my life.' Startled, I asked him how it had done that.

He explained that, in despair after the death of his wife, he had planned to end his own life. Then his son arrived carrying a Leica, some film and a copy of Collecting and Using Classic Cameras. His son told him to read the book, put some film in the Leica and go out and photograph the most beautiful country in the world.

'So I did.' he said. 'Then I bought extra lenses, accessories and a big bag to carry them in. Then I bought another Leica. You have cost me a fortune.

However, he had also become a photographer, and far too few camera collectors ever do that. So what stops them?

### THE BIG DIFFERENCE

Amateur photographers are usually motivated by the desire to express themselves visually - to communicate their view of the world or what surrounds

# **PCCGB** MEMBERSHIP

AP HAS arranged with the Photographic Collectors' Club of Great Britain (PCCGB) a special festive 10% discount on the first year's membership of the club for AP readers who are not already members.

If you are interested in classic photography, you will be able to take part in regular regional meetings, and Photographica in London (free to members), or just to enjoy the club magazine Photographica World and the club newsletter Tailboard.

Normal subscriptions start at £37, but 10% can be saved if you aren't already a member or off a gift membership. Visit www.pccgb.com or call 01920 821 611, quoting 'AP new members offer'. Offer expires 31 January 2013.

Above: A scene at this year's annual Photographica camera fair in London, run by the PCCGB, where large numbers of collectables are bought and sold. Photo by Roger **Bradley** 

Top left: A 1954 early Leica M3 double-stroke with the typical collapsible 50mm f/2 Summicron. This was the first of the bayonet M-mount Leica models

them. Often, their subject matter is connected with another long-held interest, perhaps in wildlife or architecture, but the key element is a wish for self-expression. They are fundamentally creative.

Photographic collectors are frequently keenly interested in and knowledgeable about history, engineering, optical design, camera restoration and a vast range of other subjects, but, usually, creativity and a desire to express themselves are not high priorities.

On the other hand, many collectors, particularly those who are teachers or lecturers, generously give their time to encourage others, of all ages, to learn about the history of photography and its role in social history. They give talks to schools, camera clubs and University of the Third Age groups.

Camera collecting has room for everybody, so why not help the camera collector in your life by introducing him or her to one of the world's best camera-collecting organisations, right here in Britain (see above)? AP

# AP crossword and quiz

Had your fill of mince pies? Here's just the sort of challenge you'll appreciate – one you can do sitting down

- A filtered darkroom illumination (9)
- Photographer out there on his Zone (5,5)
- 10 Image of a person or an orientation of an image (8)
- 15 Could cause a revelation in the darkroom (9)
- 16 If lenses did dance moves (4,3,5)
- 18 Now owned by Ricoh (6) 19 Elephants don't need this for
- their cameras (6,4)
- 20 Inverted film type (8) 22 Late AP Photo Science consultant
- and former editor of BJP (8,7) 24 Add these between your lens and camera for macro images (9,5)

- 27 Iconic Nikon SLR (5.1)
- 30 Noisy way to move a lens further from the focal plane (7)
- 32 Famous for photographing the D-Day landings (6,4)
- 33 Lens maker and 18th letter of the Greek alphabet (5)
- 34 Tripod manufacturer founded by Arsène Gitzhoven in 1917 (5)
- 35 Range of Canon cameras known as ELPH in the USA (4)
- 36 Using motors to focus a lens (9)
- 37 Measurement of colour temperature (6)
- 38 Iconic TLR cameras (10)
- 39 Adobe's professional image-editing software (9)

- Defunct film format that started in 1996 (1,1,1)
- Famous red-dot cameras (5)
- British camera manufacturer (4)
- One giant leap, or Swedish lunacy? (10.5)
- Photographers may need cosy footwear (7)
- This makes it easy to compare the strength of flashguns (5,6)
- Use this to look a bit closer at those negatives (5)
- 11 Uncooked JPEG (3,5)
- 12 Type of instant camera and film (8)
- 13 Primitive form of camera (7)
- 14 Russian camera manufacturer at

- the peak of production? (5)
- 17 Combining different exposures for 'energetic' tonal range (1,1,1)
- 21 Your three-legged friend, very supportive (6)
- 23 The area of focus (5,2,5)
- 25 Studio flash modifier (7)
- 26 Home of the gods, and classic cameras (7)
- 28 George Eastman's famous yellow outfit, slightly faded (5)
- 29 Type of blue (9)
- 31 New York crime photographer with 'supernatural' ability? (6)

Answers will be printed in News, AP 5 January 2013

## MATCH THE CAMERA (an you match the photographer with the camera?

- Don McCullin
- B David Bailey
- Weegee
- Henri Cartier-Bresson
- Jane Bown

Answers will be printed in News, AP 5 January 2013

### The Societies' Photographic Convention and Trade Show

Europe's Largest All-welcome Photographic Convention

Convention: 8-14 January 2013 Trade Show Dates: 11-13 January 2013

### **New Venue**

Hilton London Metropole 225 Edgware Road London W2 1JU

**Lowering the Cost of Printin** 

We are a small, family owned and run company, specialising in photographic consumables - and proud winners of the 2011 Good Service Award. We are located in Learnington Spa, in the heart of Warwickshire - if you are passing, please pop into our shop, and meet Cooper - our new office dog!

01926 339977 www.premier-ink.co.uk

### PRINTER INK CARTRIDGES

At Premier Ink Supplies, we stock two types of cartridges for Epson printers - Originals which are made by Epson, and Compatibles, which are made by a UK company called Jet Tec. Using Jet Tec Compatibles is a way of saving money, without compromising on the quality of your prints. Here're the results from two independent ink tests that agree.

"Jet Tec's colours were superb, with single greys and blacks very close to Epson ... so Jet Tec wins! - Total Digital Photography Magazine

"What we're looking at here is not only the best choice of ink for the R300 printer, but also the best ink in this group test, period. There's just no getting away from the superb combination of performance and pricing

52mm FaderND Mkll 55mm FaderND Mkll

Filters Amazing but true - by simply rotating the outer element of the filter, the amount of

adjusted from 2 stup to an 3 supercoulout.

The FaderND filter is constructed from two opposing sheets of polarizing glass, the outer sheet mounted in an independently rotating frame. The new Mk II version features both imporvied optical elements, and a thinner, conical shaped frame to reduce the chance of vignetting.

Also available is the highly acclaimed 5500MC fixed 9-stop filter with ultra-thin frame for wide angle photography.

55mm FaderND Mkli 58mm FaderND Mkli 62mm FaderND Mkli 67mm FaderND Mkli 72mm FaderND Mkli 77mm FaderND Mkli £69.99 £79.99 £89.99 £99.99 ND500MC (fixed 9 stop) 52mm ND500MC ( 58mm ND500MC 67mm ND500MC 72mm ND500MC 77mm ND500MC

27-29, Bolton Street, Brixham. Devon. TQ5 9BZ.

Mifsud Photographic offer Seasons Greetings to all of their customers, and wish to thank them for their support this year. We look forward to being of help in 2013.

With many price reductions now in-store, if you feel like spoiling yourself this Christmas, NOW is the time to act. If we are not the best UK price\*, please email us - info@mifsuds.com to see whether we can match or better for you. To help fund any new equipment, we welcome PART EXCHANGE, but can also BUY FOR CASH or SELL ON COMMISSION. To make things easier still, we can also arrange collection of your used equipment. Please email a list of what you have to sell to... info@mifsuds.com and we will contact you.

MERRY CHRISTMAS & HAPPY NE

### Sigma 18-250mm f/3.5-6.3 DC Macro OS

Now Only £399.00 Was £499.99

Purchase this lens between 01.12.12 & 28.02.13 and you can claim a FREE Sigma 62mm DG UV filter from Sigma

120-300mm

2.8 DG OS HSM

Although high-function digital cameras now deliver improved picture quality at high-ISO settings adjusting your lens to a large aperture is still the most effective strategy for action shots. And even if you have to take the shots from a less-than-ideal position, as is so often the case when shooting sports or on-stage action, this zoom lens, with its maximum focal length of 300mm, lets you open up the aperture all the way to f/2.8.

Due December Pre-order and receive a free Sigma 105mm DG MC UV filter

### **Datacolor** Spyder 4 Express

Spyder 4 Express Features:
Automated Color CalibrationSpyder 4 Express Features:
Automated Color CalibrationSpyder 4 Express 5 simple, clear
and automated process makes it
straightforward to calibrate your
displays to a reference condition.
Full spectrum color sensor - Spyder 4 Express's patented
7-color sensor improves upon colorimeters that use 3-channel RGB sensors. Each Spyder 4 Express work use 3-channel RGB sensors. Each Spyder 4 Express unit is individually
tuned in the factory to accurately handle a variety of widegamut and normal gamut displays with ease. Single sensor
calibrates all your displays - Spyder 4 Express works with your
desktop or laptop, iPad and even iPhone. It works with LCD,
LED, OLED, CRT and other display technologies. Improved
accuracy and stability - features double shielded color
fillers for an even closer match to CIE color standards and
improved long term stability.

# ROGER HICKS

Now is the time to extend the idea of 'goodwill to men' to camera club members around the world

'All photographers

throughout the world

do, in fact, belong to

PEACE on earth and goodwill to men are popular ideas at Christmas. Most subscribe to them except, it seems, in Britain, when it comes to the European Union. When the EU was awarded the 2012 Nobel Peace Prize, many were incandescent.

Why were they so angry? What do they think the EU is for? Most people in continental Europe understand perfectly well. It is to stop wars. Within its boundaries, it has succeeded. Compare this with the two world wars that started in Europe in 1914 and 1939

Yes, there have been the Troubles, and riots, and terrorism. Yet these aren't like the slaughter of millions in world wars. Nor are these like the recent wars on the fringes of the EU. Consider the break up of the former Yugoslavia. It is chilling to drive down a road lined with ordinary suburban

houses, all empty, with holes punched through their walls by tank fire. You think: that could have been my house or my neighbour's house. Slovenia has already joined the EU. Sooner or later, most or all of the ex-Yugoslav countries will

join, too. Tell me that's a bad idea.

The EU isn't perfect, and even its most enthusiastic apologists wouldn't pretend it was, but what are our most fundamental common interests? Peace on earth, goodwill to men. Even the more extreme foolishness of the EU is small beer compared with being called up to fight in a foreign land, knowing all the while that your house could be bombed and your family killed while you're away. Or, in continental Europe, compared with seeing your country invaded, your sister tortured and shot, your neighbour deported to a death camp

Define someone as 'other' or 'not like us', and you can line him up in your sniper sights and kill him without regret. If you apply this logic to the everyday, such as belonging to a camera club, you may want to kill a fellow member for all kinds of reasons, but that's personal - that's murder.

All photographers throughout the world do, in fact, belong to the same camera club. Or they can, if they want to. Photography, more than any other medium, can show us quickly and easily that other people are very much like us. And it should

Of course, it can be used for ill. The Nazis, for example, were exceptionally good at racist propaganda. Photography can also be used stupidly, especially by young men who take pictures of themselves committing crimes. It can even be used for, well, in effect, nothing. An awful lot of pictures (and a lot of awful pictures) are instantly forgettable. Yet photography, when done well, can do a tremendous amount to help us understand one another.

So here's an idea. Maybe it's worth joining a camera club, if you don't already belong to one. Then try to twin with as many other photographic clubs as possible, internationally. With the internet, you can send pictures at no expense, or if you prefer real pictures, international postage isn't that expensive. Clubs in poor countries might

even appreciate gifts of equipment you no longer use.

What is this to do with the EU? In one sense, nothing. It's just a way of reminding ourselves (and others) that the world is full of people like us, who desire happiness

and the causes of happiness. In another sense, it is everything to do with it. In the 1930s, Germany was a popular destination for British photographers. Our erstwhile rival, Miniature Camera Magazine, planned an MCM Holiday Tour through mediaeval Germany. In April 1939, the magazine stated: 'The tour proposed was arranged prior to the European crisis, which occurred just as we were going to press. It still may be possible if the situation clears, but if not it will be postponed...' Then Fr Willy Frerk, who wrote the monthly Continental letter, had to flee Prague in the then Czechoslovakia. By September, he was 'now living in London'. He was a member of our imaginary international camera club.

The last MCM quote, though, is from J Allen Cash, one of the best-known British freelancers of his day. In November 1939, with Christmas just around the corner, he wrote: 'As I flew back to London from Berlin, I looked down upon the square fields of northern Germany and saw that the grain was all cut and much of it gathered in. Time to be going, I thought, just in case anything does happen. But I could not really believe it would...' AP

the same camera club'

**Roger Hicks** is a much published author on photography. He has written more than three dozen books on the subject, many in partnership with his wife Frances Schultz. He has been a freelance photographer/writer since 1981, contributing to many magazines. Visit his website at www.rogerandfrances.com
